Business Names and Service Marks

"Aussiecon Three" is a registered business name of Victorian Science Fiction Conventions Incorporated. "Aussiecon Three, the 57th World Science Fiction Convention" is a registered business name of Fannish Educational Network, Inc., an Illinois not-for-profit corporation acting on behalf of Victorian Science Fiction Conventions.

"World Science Fiction Society," "WSFS," "Worldcon,"
"Science Fiction Achievement Award," "Hugo Award" and
"NASFiC" are service marks of the World Science Fiction
Society, an unincorporated literary society.

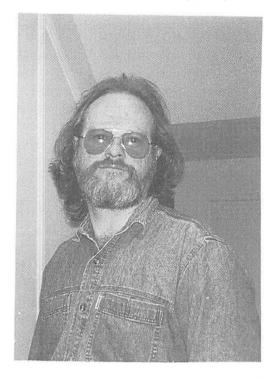

"Aussiecon Three PR#1" dinosaur cover by Marilyn Pride, who has agreed to provide the dinosaur drawings for future PRs. The drawing on this cover is an anatomical study of the main creature Marilyn did on the Aussiecon Two Program Book cover. It is part of a study for a graphics novel Marilyn is working on.

Chairman's Message

by Perry Middlemiss, Chair, Aussiecon Three

Welcome to the first progress report for Aussiecon Three, the 1999 World Science Fiction Convention, and the third Worldcon to be held in Australia. As I write it is some eight months since LACon III where we won the right to hold the convention and there are still more than two years to go before the actual event

This progress report has been designed to provide you with all the information we can muster at this time. In it you'll find details of our guests of honour, the convention site and associated hotels, and lists of the committee and our current members. As is the way with such long-term projects there is a lot of information that you will require in the next few years that isn't included here, but have no fear, future progress reports will gradually fill in all the gaps in the data log until we hope you reach a state of "knowledge bliss," with all the data you need and very little you don't. Or, at least, that's the current plan.

It is with profound regret that I announce that George Turner (one of our guests-of-honour) won't be with us at the convention. George has been rather unwell over the past couple of years and in early June 1997 he suffered a massive stroke, from which he

never recovered, and he passed away on June 8th. He will be sadly missed. He will, however, certainly not be forgotten, and while he may not be able to be with us at the convention in a physical sense, we have every intention that he will remain a Guest of the convention and that his life and work within the science fiction community will be remembered and honoured.

By the time we get to 1999 it will have been 14 years since the previous Worldcon held in Australia. It will have been a long time between parties for some of us and we hope to put on as good a show as we possibly can. While the programme details are yet to be finalised you can expect to see items covering all aspects of Austra and world science fiction and fandom, in all its forms - from professional publications to fanzines, from hi-tech hi-budget movies to low-everything amateur productions, and from fan hall costumes to professional artwork. We intend to encompass as much as we can of our rapidly growing field and to aim to exclude nothing as a matter of principle.

We look forward to seeing you in Melbourne for the start of spring in 1999. It's the best time of the year in this wonderful city. And we hope to put on Australia's best Worldcon yet.

Progress Reports Schedule

Progress Report #2, Mid 1998.

Progress Report #3, January 1999.

Progress Report #4, late April 1999.

Progress Report #5, "catch up" issue, July 1999.

Deadline for advertising space reservations for PR#2 is 1 April 1998, deadline for material is 1 May 1998. All ads should be camera ready. Contact us for details or revised advertising rates.

Greg Benford, Fan

by Ted White

In this Modern Era he's known as "Gregory Benford," the author of *Timescape*, and a goodly number of other important skiffy books, but to many of us he's still good ol' Greg Benford, faaan.

We remember when he and his twin brother Jim, stationed as Air Force brats in Germany, published a scrappy, nifty fanzine called *Void*. That was only forty-odd years ago — and several of those years were odd indeed.

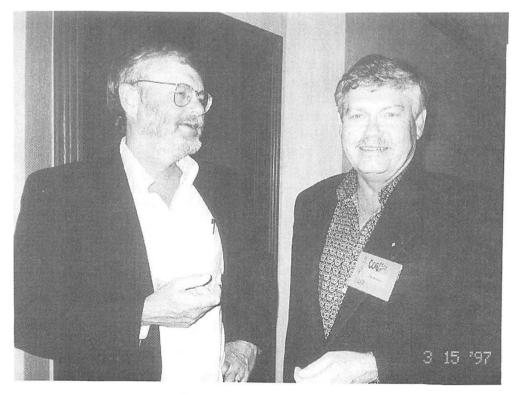

Not long after they returned from Germany and started their college years, Greg suggested I co-edit *Void* with him (Jim, the co-editor and art director — he stencilled the art — didn't want to continue with Void by then), which was the beginning of a new tradition: the growing list of Void Boys, to which we added Pete Graham and Terry Carr a year or two later.

Greg was pretty busy in college, working toward his first degree in physics, but he wasn't too busy to be a fan. He continued to write editorials ("Happy Benford Chatter"), and to edit the lettercolumn for *Void*. And the rest of us were happy to do our bits for His Fanzine.

I met him for the first time at the ill-fated 1964 Worldcon, in Oakland. Actually, I met both Benfords for the first time at that con. At first glance they were identical and not easy to tell apart, but I looked for the subtle clues. One such clue was the fact that Jim was wearing contacts, while Greg still wore glasses. As a fan I had Broad Mental Horizons and was able to deal with such subtleties. More difficult to grasp was the fact that neither Benford twin was related to Alva Rogers (whom I also met at that same convention — or, rather, at a party which preceded it), who looked uncannily like a (much) older brother, uncle, or father of the twins.

What is amazing to me is that, while the rest of us have undergone the normal aging process in the ensuing years, turning from teens into middle-aged (and older) sorts, the Benford twins have changed in appearance very little. (One popular theory has it that Greg came up with a new theoretical physics approach to immortality — it involves going faster than light and circling the universe so fast that one returns younger than one was upon departure — and Jim, whose forte is applied physics, invented the

Greg and Jim Benford at Corflu, March 1997.

machine that made this possible.) Talk with Greg for ten minutes and you'll notice that he still possesses the energy and enthusiasm of a teenager.

I noticed this at Silvercon, a couple of years ago, when Greg and I were guests of honor. He was the pro GoH, I was the fan GoH. But if anything, his speech at the banquet was more fannish than mine. Greg still gets excited about fandom, and he has the energy with which to embue that excitement. And an aura of fannish mischief hovers over him.

Back in the late seventies, when all the Void Boys had become skiffy pros, I floated a suggestion to Dave Hartwell (then the primo editor in the field) that we do a final issue of *Void* — as a book!

"I can see it now," I said, waving my arms. "We do a Typical Issue, you know, with *Void*itorials, articles, all the usual stuff, but we do it in a book format!"

Greg liked it, and Hartwell seemed at least intrigued, but Terry Carr poo-pooed it. "That's silly, Ted," he said. "No one would buy it."

That was before Greg had written the book (*Timescape*) whose title would become the imprint of a whole line of books (Pocketbook/Timescape Books) — after which his name alone might have sold a *Void* book. (But, by then, the Downunder Version of *Void* — the semi-prozine — had appeared, and without even a Please May I or a Thank You to the Void Boys....)

Actually, the last (and, it turned out, Final) issue of *Void* had come out in 1969...more than seven years after the previous issue. Terry and I had put much of it together in 1962, and in fact I'd run off a third of that issue in 1962, before bogging down on it. I hosted a New Year's Eve party at which conversation turned at some point to that unfinished issue, and, Arnie Katz and John D. Berry in tow, Terry and I unearthed both the run-off pages and the file of unstencilled and unmimeod material.

"Let's finish it and put it out," someone said. It was probably John Berry, still filled with the enthusiasm of a neofan. "Let's do it now," someone else said. It was probably Arnie Katz, still filled with the smoke of serconnishness. Terry and I both sighed and said, "Sure. If you guys will do the work."

So we devoted the next two days to a whirlwind of activity, John typing stencils, Terry and I stencilling artwork, and Arnie coordinating us. We had only one problem: Greg was 3,000 miles away. In this pre-fax, pre-e-mail era, there was no way to get a contribution

from him — but an issue of *Void* without "Happy Benford Chatter" was unthinkable.

Terry had the answer: "You do it, Ted."

Terry was referring to another Old *Void* Tradition, one somewhat less known, the tradition of *Void* editors writing each other's material. There are sections of my *Void* editorials from the early sixties that were written by Terry, and Terry was not above inserting a paragraph or two in Pete Graham's editorials as he stencilled them.

So I wrote a "Happy Benford Chatter." I wrote one entire section — the part about the new issue — from scratch, and stole the rest from late-fifties editorials Greg had written, with minor updating to make them seem current. Thus, Greg maintained his place in *Void*, and, as I expected, no one caught on; no one remembered the earlier editorials from which I'd cribbed.

In fact, Greg himself seemed confused about the editorial. The next time I talked to him, he asked me, "Did I write that? Parts seemed familiar...."

We talked frequently in those days — the late sixties — because Greg was working at the Lawrence Livermore Lab, which had a WATS Line — the precursor to modern toll-free lines. He used to call me once a week, and we'd chat for an hour or more. Some of it was about writing (Greg was in the process of becoming a skiffy pro) and The Field, but more of it was fannish chatter and gossip.

Over the years we've kept in touch, visited each other, and run into each other at cons, and if Greg's fanac has dwindled with his success as a Filthy Pro and Reknowned Physicist, it has never ceased entirely. He still contributes occasionally to fanzines like *Trap Door* and *F&SF*.

So, when you see him at Aussiecon Three, don't rush up and ask him to autograph one of his books. Instead, just walk up and ask him, "What's new in fandom, Greg?"

And watch him really light up with bright enthusiasm.

Bruce Gillespie

[We couldn't find anyone to do a better job of introducing Bruce than Bruce himself. This is from an apazine for Acnestis. (Eric Lindsay, PR1 editor)]

- I was born on 17 February 1947.
- Lived at Oakleigh, a suburb 13 km south-east of Melbourne, Victoria, Australia, then all round Melbourne; some time in the country; then inner suburbs.
- Parents: Frank (d. 1989) and Betty; two sisters: Robin (b. 1948) and Jeanette (b. 1951).
- Went to school at Oakleigh State School (now called Oakleigh Primary School) for Grades 1 to 6 (1953-58). Then to Oakleigh High School (now defunct for lack of students, although it had 1100 of them in 1959) for Forms 1 to 4 (1959-62). Then to Bacchus Marsh High School (50 km west of Melbourne) for Forms 5 and 6 (1963 and 1964). Three years of Arts, majoring in English and History, at the University of Melbourne (1965-67) followed by a perfunctory year of Diploma of Education (1968).
- Bought my first copy of Austrailian Science
 Fiction Review in 1966, but joined fandom only at
 the beginning of 1968. First convention: 1968
 Melbourne Science Fiction Conference.

- Thrown to the wolves in 1969: attempted to teach for two years at Ararat Technical School. Liked teaching about as much as D. H. Lawrence did. Worst two years of my life, but
- Began publishing SF Commentary at the beginning of 1969. The first eighteen issues appeared in its first two years!
- Beginning of 1971: by a weird series of accidents
 I gained a job I liked: editor/writer for the
 Publications Branch of the Education
 Department; invaluable pressure course in
 learning to edit magazines and books and write
 for magazines.
- 1972: Gained first Ditmar Award and first Hugo nomination for SF Commentary. Kissed a woman for the first time. (Don't laugh immoderately. If it hadn't been for fandom giving a boost to my minuscule self esteem, I might never have got around to kissing.)
- 1973-74: Quit Publications Branch to do my one and only Big Overseas Trip. Four months in Canada and USA (Torcon to beginning of January 1974); one month in Britain (all of January 1974). I recovered, although most of the people I stayed with didn't. Met in America someone I wanted to marry, but for the usual complicated reasons, didn't.
- 1974: Became a freelance editor, and lived in a wonderfully grotty flat in Carlton Street, Carlton.
 Met Elaine for the first time, although she doesn't remember the event.
- 1975: Many exciting turn-ups, including the formation of Norstrilia Press with Carey Handfield (and, later, Rob Gerrand). Our first book was Philip K. Dick: Electric Shepherd. Also Aussiecon 1, Melbourne's first Worldcon. I was officially coordinator for Ursula Le Guin's Writers' Workshop. Rotten coordinator, but I did get to meet Ursula, attend the Workshop and write some stories. Attempted to share my life and grotty flat with a wonderful woman. This lasted from August until October.

- 1976: Did various lugubriously awful things, such as falling in love with a woman who was already in love with someone else. Wrote agonised fanzines about all this. Finished the year sans flat, sans job, sans much hope at all. Everybody should have a year like 1976 to remind them how good the rest of their life can be.
- 1977: Invited by Elaine and Frank, the bloke she was living with, to share their large flat in Collingwood. I brought with me two cats (my cat Flodnap, and Flodnap's cat Julius) to add to the household's Solomon, Ishtar and Apple Blossom. Gained a half-time freelance job as assistant editor of the magazine of the Victorian Secondary Teachers Association. Was flat broke most of the year. Elaine and I found that we lived quite comfortably in the same house.
- 1978: Frank finished his medical course, and was posted to Tasmania to do his internship. After what seemed to us an uninevitable series of events, what other people took as inevitable happened: in early March Elaine and I began 'living together' rather than 'living in the same house.' Early April: freelance work began to pour in, and I left the VSTA job. Phew! Norstrilia Press bought an IBM Electronic Composer (a cross between an IBM golfball typewriter and a computer). I began several profitable years of typesetting books for NP, Paul Collins, Hyland House and several other publishers.
- 1979: Elaine and I get married almost exactly a year after we started living together. A small event, with 14 close relatives. The wedding photos show that I had lots of hair then, and Elaine had very long hair.
- 1980-84: My work began to disappear, even as Elaine decided to become a proof-reader and editor. Not enough money to publish SF
 Commentary, so it did not appear for eight years. In a fit of madness, I published SF Commentary Reprint Edition: First Year 1969 in an edition of 200 copies; 80 of them are still unsold.
- 1984: Macmillan offered me the arrangement I'm still working under: I stay a freelance, but work mainly for them, first as an editor, then as a desktop publisher.

 With real money in my pocket for the first time in three years, I began *The Metaphysical Review* (and revived *SFC* in 1989).

- Elaine rose quickly from being a freelance proofreader to being a full-time proof-reader, to gaining a full-time job as editor.
- 1985: Financial disaster! I bought a CD player, and then began buying CDs. Lots of them.
 Virtually bankrupt by 1987, but Elaine rescued me (and got me to cut up my Bankcard). CDs are still my favourite waste of time.
- Not much after that except keeping our collective heads above water. Elaine's mother died in 1987, my father in 1989, and Elaine's father a year later. Grow old; wear trousers rolled; disappearing hair; much death of old cats and acquiring of new cats: present crew are TC (16 years old and fading), Oscar (11 years old), Theodore (10 years old), Sophie (5 years old), and Polly (7 months old). Elaine became a freelance editor, also working at home, a couple of years ago. Because she's one of the few maths/science editors in Victoria, she has plenty of work.

In summary? My story is that of a very shy lad who happened to find science fiction fans, the one group of people who could (partially) socialise me and give me a place to exist. Fandom has been very kind to me. My story also shows the yearnings of someone who would have liked to do something magnificent in the literary line, but could never work out what it might be, and is now sure that he hasn't the talent to do it. I've never written a novel because I could never think of an idea that might stretch to 60,000 words. I've had a few stories published, but, dispirited by my own stuff, have written no fiction for ten years.

Kosher Tour

Not part of Aussiecon, however former DUFF candidate (and 1995 visitor to Australia) Lucy Schmeidler plans a Kosher Tour of Australia. You don't need to be a convention member, nor keep kosher, nor be Jewish, nor need you come from overseas. Contact Lucy at 470 West End Avenue, New York, NY 10024-4933, phone +1 (212) 580-0207 or email lucys@panix.com

George Turner

1916-1997 by Judith Raphael Buckrich

George Turner was born in Melbourne in 1916, but spent the first six years of his life in the gold mining city of Kalgoorlie in Western Australia at the height of its boom. He has had a strange and complex life, and since the 1960s, has possibly been the greatest influence on Australian science fiction as a critic, essayist and writer. The great love of his life has been science fiction. Like all great loves it is full ofcontradictions and marked by periods of neglect, partial attention and total passion.

His love of science fiction began when his father read and re-read *Alice in Wonderland* to him at the age of three. Some cousins remember him as being able to recite whole passages of it of by heart. When he was eight or nine, he started visiting one of his aunt's houses and there found the works of H. G. Wells and Jules Verne. After that there was no stopping young George who started to buy copies of *Amazing Stories* as soon as they arrived from the U.S. at the newsagents opposite St. Paul's Cathedral in Swanston Street, where he was a not so angelic choir boy. He was addicted to these, and would often take the risk of stealing money from wealthier relatives to buy them.

Although he was already writing from the time he was ten — or perhaps even younger, he did not send anything away to a publisher till he was over 40. This was a novel called *Young Man of Talent* and it was immediately accepted by Cassell in London and published in 1959. It was a sort of war novel.

He wrote six mainstream novels between 1959 and 1968. For one of these, *The Cupboard Under the Stairs*, he received a joint Miles Franklin Prize. His last mainstream novel was the much under-rated *Transit of Cassidy* which he finished in 1968 or 1969, but which was not published till 1978, just after his first science fiction novel, *Beloved Son*.

In 1967 George Turner had met John Bangsund who was publishing Australian Science Fiction Review. Turner began to write for it immediately. Among his first contributions was an article called "The Double Standard" in the June 1967 edition of

Austn Science Fiction Review. And with little experience at criticism he confidently took the reviewers of science fiction who wrote for the fanzines to task about the quality of their reviewing.

Beloved Son was a success. It was doubly delightful that Transit of Cassidy was finally published, by Nelson, at almost the same time. Cassidy had come second as an entry for the Alan Marshall Award in 1977, and Thomas Nelson who financed the award decided not to publish the winner, but rather to publish Transit of Cassidy.

The next book, *Vaneglory*, was set mostly in Glasgow. It was about a group of beings who looked exactly like humans, but who were in fact genetically able to live forever. It was set in an apocalyptic world in the near future (as are many of Turner's works), which was slowly dying from destruction of the biosphere and from radio-active dusting being used as a weapon of war.

The third of this loose trilogy, Yesterday's Men (Faber and Faber, London 1983) is a strange book set in the future in Niugini. I say strange, because in some ways it harks back to his first novel A Young Man of Talent, and not only because the two books share the setting of the jungles of that extraordinary country, but because both novels are also about soldiers and war. Turner has often said to me that war is really the place where men grow up, that he believes that war, for men, is to some degree like childbirth for women. Vaneglory (Faber and Faber 1981) and Yesterday's Men (Faber and Faber 1993) were building in the detail of the fictional world that Turner has more or less stuck to since Beloved Son.

His next book was the autobiographical *In the Heart or in the Head* (Norstrilia Press 1984). It combined a parallel life of George Turner and life of science fiction, and is a gem as an overview of the latter, but hides more than it reveals about Turner himself.

Then *The Sea and Summer* came out in 1987. It won the Arthur C. Clarke Prize and the Commonwealth Literary Prize for the South East

Asian Region. The book tackles so many issues that it's hard to write a summary. Here are just some of them — overpopulation, the greenhouse effect, political corruption and poverty. It is set in the far future with a few sharply different characters looking back at a near future in Melbourne. It is this near future that really takes up the bulk of the book. The story is about a family in crisis, except that the crisis is permanent and a symptom of the crisis the world is having. Turner's vision of Melbourne is gripping, especially to readers familiar with the geographical areas he is describing, and this strange picture of the familiar altered only slightly is more startling than any alien world full of strange creatures, and much more disturbing.

Each of his books in turn seemed to be more exciting and more human. And Turner himself was, throughout this time involved not only in the science fiction scene, as a critic, and very often as the father figure who young writers would send their manuscripts to, but he now gave lectures on science and the future to conferences and groups outside science fiction circles, indeed outside writing circles.

Brainchild (AvoNova, New York, 1991), The Destiny Makers (AvoNova, New York, 1993) and Genetic Soldier (AvoNova, New York, 1994) are Turner's most recent books and all have contributed greatly to the science fiction of ideas and ethics which continues to play such an important role in literature and cultural debate.

Turner has contributed greatly to Austn literature. His point of view is totally individual; he writes with a purpose. He writes because he cares. The big picture is always the world we are creating, and the small one the struggle of the individual to deal with it, and his or her ultimate loneliness in this struggle, despite, or often because of those who share the struggle. As to us, his readers, he has given the gift of the future or really the gift of the present. It is a simple truth that none of us can ever know the future, but understanding the present might help us to a better world.

Bibliography

Young Man of Talent: Cassell, London, 1959; Simon and Schuster, New York (as Scobie, 1959)

A Stranger and Afraid: Cassell, London 1961

The Cupboard under the Stairs: Cassell, London 1962

A Waste of Shame: Cassell, Australia, 1965 The Lame Dog Man: Cassell, Australia, 1967 Transit of Cassidy: Nelson Australia, 1978 Beloved Son: Faber and Faber, London, 1978
Vaneglory: Faber and Faber, London, 1981
Yesterday's Men: Faber and Faber, London, 1983
In the Heart or in the Head: Norstrilia Press,
Melbourne, 1984

The Sea and Summer: Faber and Faber, London, 1987 Brainchild: AvoNova, New York, 1991 The Destiny Makers: AvoNova, New York, 1993 Genetic Soldier: AvoNova, New York, 1994

Child	A\$45	US\$35	£25
Infants	free	free	free

Child memberships available for those born after 1 September 1987.

There are **discounts** for those who were presupporters, and those who voted in the site selection election held by L.A.Con III. Contact us for pricing. These discounts will end after 1 November 1997.

Dealers Room

The reservation of tables in Aussiecon Three Dealers' Room is now available. An A\$50.00 per table deposit, to a maximum of five tables per dealer, is due upon booking.

When booking, please send the following details: name, business name, address for all correspondence, phone, fax, e-mail, type of merchandise, and special requirements. Payment may be made by cheque or credit card (Mastercard & Visa - just send or fax your card type, card number, name as it appears on the card, and the expiry date), and a receipt will be issued immediately.

Please note that all dealers must be attending members of Aussiecon Three, and that Aussiecon does reserve the right to accept or not accept any dealer.

Please direct all correspondence to:

Justin Ackroyd – Aussiecon Three Dealers' Room G.P.O. Box 2708X

Melbourne, VIC 3001

Australia

Phone & Fax:

Within Australia: (03) 96391511

Outside Australia: +61 3 96391511

Further details (final table price, hours of business, et al.) will appear in a later Progress Report. If you have any queries in regard to Aussiecon Three's Dealers Room (e.g. Australian Customs requirements for overseas dealers) please do not hestitate to contact us.

Weapons Policy

Basically no weapons. The masquerade director may approve weapons as part of a costume entered in the masquerade.

The Convention Site

The convention returns to Melbourne, Australia, to a new site for us at the World Congress Centre, and the attached Centra on the Yarra hotel, located by the banks of the Yarra River, just 1.5 kilometres SW of the centre of Melbourne, on Siddeley Street near the corner of Spencer Street and Flinders Street.

The three function floors of the World Congress Centre include two theatres, plus program rooms and a ballroom. 6,900 square metres is available. The Centra on the Yarra hotel is attached to the site.

The reception areas for both the World Congress Centre and the Centra Hotel are directly off a ramped vehicle access around the Centre at the second floor entrance to both. (In Australia, as in North America, the second floor is the one immediately above the ground floor.) This area is flanked by seven smaller meeting rooms, and a tiered 400 seat theatre style room. The hotel has kitchens, restaurants and a bar downstairs, while the World Congress Centre ground floor is exclusively utilities and unloading areas.

Escalators take you from the lobby up to the main function area on the third floor, and open directly upon the atrium. At one end, full length windows give a view of the city and river. There are five rooms for smaller panels (130 capacity), plus a 1000 person room. The largest room on this level is the tiered 1400 seat Batman Theatre (not named after the comic book hero). The top floor contains another five smaller rooms (180 capacity), and a pair of considerably larger rooms, which can be opened to form a 2500 capacity ballroom.

All rooms, including concourses, are fully carpetted, and all partitioned walls are sound absorbent and reach the full height to the high ceilings. There are lifts (elevators), escalators and stairs to each floor. There are disabled facilities on some floors. The centre meets Australian standards for handicapped access.

Judith Buckrich in Conversation with George Turner

This conversation took place on the eve of George Turner's 78th birthday, at Turner's home in Ballarat. I was asked by the editors of *Eidolon* to interview Turner in September 1994, well into the third year of my work on his biography. We found it difficult to stick to the 'interview' framework; our association has been based on many 'interviews' towards the biography and on correspondence. During the course of time we have become friends and developed the habits of conversation that always go beyond the bounds of interview; we find it difficult to stick to 'the point,' thus the result is a conversation, and not an interview.

My brief from Eidolon was to talk mainly about Turner's last four books, The Sea and Summer (Drowning Towers in the US), Brain Child, The Destiny Makers and Genetic Soldier, and about science fiction in general.

Let's begin with The Sea and Summer. What were your motivations for writing it?

I wanted to write a science fiction book in the mainstream form - concentrating on people and events. And about the greenhouse effect, but about how it could affect people, not the environment.

Aren't you one of those science fiction who always write about people?

To a great extent, but in this case I wanted to write a novel that would not depend upon science for its effect. There were people in a situation (in *The Sea and Summer*) and they had to behave as their situation drove him. Nothing to do with being driven by new inventions or anything of that sort.

One of your other great interests is population. You've spoken at conferences about it, you've written about it. Do you see the kind of problems that appear in The Sea and Summer around you already?

Not in Australia. But in other parts of the world. For instance in the situation in Africa, with all the tribes fighting in central Africa in particular. I think

that a lot of that is driven by overpopulation. They're clearing the jungle. The same is true in South America, particularly in Brazil where the natives are being practically deprived of their living. In fact they're moving into the cities because their jungle living has been destroyed. They've got nothing to eat unless they move into cities.

You always write about people in cities, apart from in Genetic Soldier where there are no cities left. Don't you see any impact, even in a city like Melbourne?

Melbourne, or any big city, provides me with things that I can look at and I can say, yes, well that won't last, or this has got to be changed; things of that sort. For instance the towers in *The Sea and Summer* are the direct outcome of bankrupt government and automation. Of course we haven't even seen the beginning of automation yet.

Do you think there's going to be a lot more?

Oho, we think we've got ten percent of people out of work and that's bad. I think it will go to forty and fifty before we're through.

Do you think that in your following three books, your science fiction has continued to be peopledriven?

Once I've got the general idea of background, the characters are the main consideration. Particularly the main characters: they have to be set even before I start writing.

What do you mean they have to be set?

They have to be a physical and mental type and I have to have some idea of their philosophical orientation; what kind of people they are. And from then on they stay that way. As events happen, they have to react to them in the persona I've given them, they're not allowed to act any other way.

So you control it quite strongly, how these characters behave?

No, I don't control them, that's the point. Once they're set, they're out of my control: they have to react to what happens.

What about what happens, do you have an idea of what will happen? I mean obvious at the beginning you have an idea, but do things ever develop completely differently to what you expect?

Quite often. I know the end of the novel to some extent - I know the point I want to get to - but I don't know what will happen in the middle; that has to take its own way. So what happens generally is that the last twenty thousand words might take up to six months to write because I simply don't know where I'm going and how I'm going to get there. And it might take me six months to work it out.

When you say the main characters have to be set, what do you mean? The main three or four? Is it also true of the minor but important characters.

No; they're the sort of people that major characters are liable to run into.

Because of the kinds of characters they are?

But also because of the circumstances under which they live.

I want to ask you about your female characters. I know you have been asked about them before, but I think in Genetic Soldier there is actually a change in your attitude towards them. Do you think there is a difference between the way you set your female characters and your male characters, or not? For instance in The Sea and Summer, the two mothers: were they two characters that were already set?

No they weren't. The middle-class mother (Alison Conway) was an afterthought. When I started describing the house, the idea of the husband killing himself came to mind, and then I realised that there had to be something to hold the family together, so I turned back and wrote the introduction from her point of view. And it also gave me the final scene. But the two boys, Francis and Teddy, and Kovacs, they were set. And the other woman, the business woman, Nola Parkes. She was necessary in order to get the boy on his upward path.

So I'll ask the question again: do you think there is a difference in the way you set out to write about men and the way you set out to write about women? Not sure. Let's go on a bit of a diversion here. Right from the start, when I first started to write, I was determined that there weren't going to be any forced love affairs. Because as far as I can see in actual life, either the women are central to what's happening or they're peripheral. Even when you have a family man who is, let's say, involved in business affairs, the plot is going to hang on him. If you have the plot centred on a woman, you have to handle it from a different point of view.

Now, I write about men, because I know them better. But when it comes to - there must be some women naturally, then I sit down and start thinking what sort of women are these liable to be.

Now, for many years, before I started writing science fiction the personality of my mother dominated the female characters far too much. Eventually I got rid of her in *Beloved Son* - it was rather a brutal act, but still, I did it.

Then I found that I was interested in my father, who I didn't know. Well, I was six years old when I last saw him, so I can't remember. From then on I started to concentrate on rather different female types. *Brain Child* used quite a lot of them, fairly experimentally really. In *The Destiny Makers*, I knew what I was about then.

What do you mean, you experimented with female characters?

I gave them very definite, strong personalities. And they were created simply to kick the book along.

In Brain Child when David Chance has that sexual experience with one of his "aunts" - Belinda - that's quite an extraordinary scene. There's a woman who is so strong, even if she is a bit two-dimensional. That's a thing I find in your work, that you have a way of presenting female characters as two dimensional, but enormously strong. It's confusing. I kind of admire them, but I don't understand their motivation. This happens more with your female characters than your male characters.

Yes. All my female characters are strong, but I've never sat down to think about it. I think what happens is that I conceive the strength first and then I build the woman around it.

It's not how you work with men.

Sometimes it is. Kostakis in *The Destiny Makers* was like that. Whereas Osrov (also in *The Destiny Makers*) was aspects of me. And Kovacs in *The Sea*

and Summer appeared full blown. I don't know where he came from.

Perhaps it was a result of living all those years in St. Kilda with all those East Europeans around you. Were you affected by that at all?

No. I'd had five or six years working in an employment office (1946-1951 approx.) so I knew all those different kinds of people backwards and forwards.

Do you still draw on that?

Yes I do for odd traits of personality and actions.

When you're writing, is each book a different experience? Can we talk about the difference between writing The Sea and Summer and Brain Child?

The Sea and Summer was an outcome of one of my mainstream novels. I simply wrote that with a complete concentration on the characters. Brain Child was a very deliberate book. It was started as a short story and I realized that I'd told the wrong tale. So I sat down and wrote the right one.

How long does it take you to write a book?

About two years.

And how does it happen; what happens in those two year?

Usually I start with an introductory twenty thousand words to establish the theme and style, and then I throw that out and start all over again.

How long does that take?

About six months.

And then you throw it out?

And then I write all the things I've learned in the six months.

When you say six months, do you sit down every day to write?

No, I'm very bad in that respect. I stop writing at the slightest excuse.

Is there a particular time of day when you like writing the most?

At night, though lately I've begun to write in the morning, since I've been here in Ballarat.

Are there times when the thing is doing nothing but gestating?

Whenever I come up against a point where I start wondering what happens next I simply stop and shove it down into my subconscious and in a week or so I can say "oh yes, that's it."

What do you read, George?

What do I read?

I'm trying to get an idea of where you get your inspiration from. Where are your sources?

I read everything that you can think of. The classics, science, essays.

Do they input into the work as you're going along?

I don't know. They produce useful facts. My inspiration usually comes from whatever happens to be interesting me at the time.

What inspired Brain Child? Was it just concern about genetic engineering?

To a degree. But more the science fiction idea that the super mentality has got to be a super mind in the way that we understand it: like our own minds only better. I tried to point out that there might be all sorts of different minds. And that they wouldn't necessarily be better, they would be less effective in some ways. And then there's the questions of how we as normal people would react to them. I came to the conclusion that on the whole we wouldn't want them (the superminds).

And that's the tragedy of Brain Child, isn't it, that they're like aliens and so the others don't want them? But is Brain Child also about a search that someone makes with their own life? Is the search for one's life a common thread in your work? It was there in Transit of Cassidy too.

Yes it is. But it's common to a lot of novels. It was there in *The Destiny Makers* too. Though Ostrov isn't really searching, he realizes that he has to change his mind.

Change his mind about what?

About his whole attitude to life really. It begins with his parents, who as a youngster he's more or less despised, and finishes up in the last couple of pages looking to all the things he can do for other people. He's had a chance to have a look at his own subconscious.

It's interesting that both in The Destiny Makers and The Sea and Summer it's the ordinary people that you like, and that the reader gets to like. Do you admire these people who are struggling to live?

I don't know about admire them. I understand them.

Does that come from your own experience? Or from your mother and grandmother?

Actually it is mother's struggle. I've never really had to struggle. I haven't had it easy. On the whole I've had it pretty good. Even in times of recession I've always had a job.

There was that one time when you went to Sydney and you came home broke. You said that you literally had nothing.

Yes that's true. I had no money and no job. What did I do then?

All I know is that John Bangsund gave you a typewriter.

Oh I know, I went to work for Carlton & United. It only took a few days. The first thing I tried was the Melbourne Tramways, but I had to tell so many lies about my age [GT was over 50] that it was a waste of time.

Did you want to be a tram conductor?

Anything. I just wanted a job.

George Turner the tram conductor - that would have been great.

Then I tried Carlton & United. Someone suggested it. I had to lie about my age there too, but no-one checked it. They found out eventually though.

What did you say when they found out?

They asked me why I'd lied, and I said that I needed a job, that's why. By that time I'd had a promotion, so what the hell.

Getting back to the books, the last four are very different from one another, much more so than the first three science fiction books [Beloved Son, Vaneglory, Yesterday's Men].

Yes. Three of them were set on totally different worlds. The fact that they were all set in the greenhouse was just a background.

With a book like The Destiny Makers which is so much about politics -

No.

You don't think so?

Pretty superficial politics.

It does have a go at political corruption of the kind that exists in the world today.

Yes; I accept corruption as part of politics.

What did you feel about The Destiny Makers when it was finished?

It was a 'plotty' novel. I was all the time working out how to get from point A to point B. The only really connecting thread in it was Ostrov's self discovery.

Well if you weren't happy with it, did you try to rewrite it? Or did you just accept it the way it was?

No, I just accepted it the way it was. I got to the end and felt that any kind of rewriting would have to take a whole new theme.

So would you say that, of the last four novels, this was the one that satisfied you the least?

Yes.

How have the reviews been for the four?

They've all had good reviews, except *Brain Child* had one real stinker from Brian Stableford. But I didn't worry too much about that; on the whole they were well reviewed.

The Destiny Makers was too? Did anyone mention that it was too plot-driven?

No.

Let's talk about Genetic Soldier. When did you finish writing it?

Sometime early in 1993.

What was the driving force for it?

Originally it was a short story called "I Still Call Australia Home". Someone, I think one of the fans, wrote and said that in the short story, there didn't seem to be enough reason for a starship coming home to be driven away. So I provided a reason. And, working backwards from there, I had to create the different kind of characters. And it involved creating a world that was very simple on the surface and very

complex underneath, because I don't believe that there are any simplicities in human relationships; none whatsoever. And it had to be a kind of civilization that the 'old' people couldn't merge into whether they wanted to or not.

And there were lots of other things that I wanted to put in too. For instance, the idea of a starship leaving Earth and looking for other planets; now that's a commonplace of science fiction, and one of the things I wanted to point out is that as far as other liveable planets go, there might be one in ten million. It's very unlikely that they'd find any in a lifetime, which really is the reason they wanted to come home.

In the Locus (August 1994) review it says that Genetic Soldier is a book about a homecoming starship, but it also calls it a Utopia. And you've just said that that's how it seems on the surface, but really in order for human beings to create a real Utopia, they'd have to become something else, wouldn't they? And there is the theme of belonging and the question of home. Tommy in Genetic Soldier eventually runs away from his home because he doesn't belong even though he has always lived there.

He's running for his life.

Yes. But right from the start the reader senses that he is different, that he doesn't fit into the forced genetic system of the place. He's friends with someone who is not in his own group; his father is an Ordinand, he has a whole lot of things in him that mark him out, including the fact that he was conceived in 'Carnival.' And 'Carnival' is a very strange concept too, a time when anyone can mate with anyone. Is that part of the Utopia, or is that a 'disorder'? And is there something tragic about the starpeople coming home and not being able to stay. The disappointment of not finding yourself or what you're looking for is a common theme in your work isn't it?

Yes. But I think it's true of most people. I think most people are disappointed with their lives. People grow up to marry and have children, and that is the great ambition, but I wonder how many of them are satisfied with it? They don't seem to be satisfied with their wives or husbands, or with their children. They, think, if only, they'd taken the other one it would have been better. But it would only have been different. I've always had the feeling that as human beings we're only at a transitional stage, that we're only at the beginning of understanding what it means

to be human. And if we last several hundred thousand years, and we get to the roots of intelligence and are able to manage our lives, then humanity will begin. This is only a childhood stage.

Do you think that people are conscious of this? Do you think people are not just dissatisfied with their lives, but also with the limits of their humanity?

Yes. That could be true. Imagination is the great refuge.

For people like you and me, who were only children and found our refuge in books - and you started writing early too - imagination is the great refuge. But do you think that's true of everyone? For people who don't write or paint?

Of course. They dream of having money, they dream of having brilliant children, or success in their jobs. They always dream of something they're not capable of: the great ambition of the beauty-contest winner who wants to go to Hollywood, but who'll just marry the boy next door.

When one first starts to read Genetic Soldier the air is clean and there are gum trees, the reader is aroused to a kind of longing. When you start writing about a world like that, or like the far future world of the autumn people in The Sea and Summer, is there something in you that longs for that sort of world?

No, I'm a city boy. Not that I haven't had country experiences; I can appreciate it, but I don't want it.

Yet when you write about it, there is a strong sense of something very positive about it; the physical strength of people, the fact that they walk long distances and work hard.

The point of those people was simply that they were 'created' by a scientist hundreds of years before who thought he was producing people suited to their environment. What he got was human beings who went their own way.

What about the 'Library'? I mean, despite the perfection of these people in terms of their environment, they are so interested in the past that they find in the old books and they are also interested in a Buddhist kind of working-towards-Nirvana. The past, present and future are linked up. Why is it the past that is so important?

The past has always been important to humans; look at the fascination with historical novels. No, the

general idea was that the scientist who created the genetic races had one ambition, but people being people found another one - for instance the ordinands and their interest in the investigation of the mind.

And the 'Net' is a result of that.

Yes: 'Indra's Net'. I had to do a lot of research for that. The general idea was expressed in the last line of the book.

But that is the strangest scene at the end. I mean the starship people have stayed the same, and yet on Earth this extraordinary thing has happened; human beings have become something else.

The inspiration for that came from the Australian Aboriginal fascination with "Dreamtime" and the Earth; the sense of belonging which is something I don't believe any other race has in such a strong way. There's a novel by someone that credits the *Kudaitcha* men with being able to separate the spirit from the body. But they don't talk about it because in Aboriginal hierarchy information can only be passed on to someone who has been initiated.

Is this interest that you have in Aboriginal society partly a result of your thinking about your own background?

Yes.

I don't think that many people know that you have Aboriginal ancestry. You've kind of meshed the Aboriginal indigenous ideas with Buddhist ones.

And, of course, morphic resonance. Those experiments with the rats and the platypus were done and they were the real results. But no one's ever gone any further with it.

Yes, it's interesting how these concepts come up and then disappear. Getting back to Genetic Soldier, do you think that it could be perceived as didactic at all? Is didacticism one of the marks of your work?

I think like anybody. I have my perceptions of human nature and I try to write about real people. I'm not interested in superman heroes. People have to behave as I see them behaving. If there is any didacticism, it would be an outpouring of my own personal beliefs, and I've never really examined them to find out what they are. In *Genetic Soldier*, for instance, I don't know where didacticism would come in there. I don't know from one moment to the next where the plot was going. And the final chapter came

as a result of a complaint that the book was unfinished. I wanted to end it at the point where Tommy said "and now the stars".

One of the other things I wanted to ask you about was the extraordinary sexuality of "the match" in Genetic Soldier. Where did that idea come from?

It just suddenly appeared. It may have been simply that I was reading about pheromones and it clicked into position. And also it was logically possible.

Other animals do behave like that don't they?

Butterflies can detect each other from a mile away. All the dogs in the neighbourhood know when a bitch comes on heat.

It was also about controlling violence wasn't it?

Yes. I wanted to discuss how a civilized man would control violence.

Yes, but it was also about how women control the men in the Genetic Soldier society through 'the match'. The implication is that women aren't as violent as men.

My feeling about violence has always been rational. Kovacs in *The and Summer* believes that violence is necessary under certain circumstances, hut it practically kills him when he tries it.

Tommy in Genetic Soldier was like that too. In fact it was one of the keys in the book because he realized that he wasn't what he seemed to be at that point.

The book I'm writing at the present time will deal with the genetics that appear in *Genetic Soldier*. There will be the question raised that, if the Earth is overpopulated and the only means of getting it back into liveable condition is to cull humanity, what is the moral standpoint? That is what the last part of the book will be about, with Ostrov (see *The Destiny Makers*) dealing with it to some extent, and that despite his *kill the lot of the bastards* reaction he has to have a civilized approach. And he's up against the scientist Wishart whose approach is simply that if it's necessary it's necessary. Who has the right to say if it's necessary?

This is something you've been thinking about for a long time - about the morality, of it.

Well, you have the church complaining about abortion. They put the moral clement into it right away.

They do and they don't. There's plenty of people who don't think it's immoral to terminate an unwanted pregnancy.

What about Chinese morality, putting girl children on a hillside? Morality comes up against necessity. But whose necessity is the question. A human being is only a source of making another human being. God's great mistake was to give us brains.

I still want to talk about the extraordinary sexuality in Genetic Soldier and in Beloved Son. It's a typical George Turner thing that out of the blue you get a sexual event happening. It does always seem to be an extraordinary event in your work. In 'normal life' in your books we don't seem to get much sexuality referred to at all, in the every day. When it does happen it always seems to have great significance. Is there a reason for that? Do you think sexuality is a strong force?

Obviously it is. But I think it comes from memory.

A memory of an event in your life?

No, the whole business of sexual contact. You see, I had the prostate operation about ten years ago and a prostate operation does nothing about preventing sexual requirements. What it does is prevent you from doing anything about it.

The desire is there but

Actually it's been stronger than it ever was before.

Just before we finish up. Do you have any thoughts about what is happening in science fiction in general? Do you think there's anything new happening?

No, I don't think so. There are a few a writers trying to keep up to date and handling new ideas as fast as they come out, but my real thought about science fiction at the present time is that it's been swamped by fantasy and that too many science fiction writers are trying to beat fantasy at its own game, turning out science fiction that really is fantasy, except that it's hooked on a single idea of genetics, or virtual reality, or something of that sort. And that people are writing very long, involved novels that are about practically nothing; start with an idea and have

an adventure. Start with an idea, I say, and see where it leads

Do you think it's because we're up against a huge number of problems but we don't seem to be up against any one particular thing that we can put our fingers on?

Well yes, but one of my great complaints about science fiction is that it doesn't deal with our present problems at all. I mean, we've had dozens of novels in the past talking about an overpopulated Earth, but what you get in the outcome is bigger buildings and bigger cities; nobody talks about how we're going to feed them. Nobody talks about clearing the forests or running the animals off the ground, because that's too difficult. They never think out what the result of the bigger cities will be, and that's the great point.

Do you think that that's true only for science fiction, or for fiction in general?

In science fiction, money drives: that's what all the big novels are about. You feel as though the writers are turning them out over the weekend.

Do you think the mainstream pool is bigger, so you get greater variety?

I think it's the same for both. It's not usually the big sellers who are the best writers. I mean people like Jeffery Archer are a catastrophe.

At this point we had a good laugh and I stopped the tape. We were both tired. George as usual had some new, and interesting things to say about his work and the world, and had avoided the questions he didn't want to (or couldn't) answer. I was pleased that I had managed to broach some aspects of his work that he finds it difficult to talk about - the question of female characters and of the way he deals with sex. Of course the answers weren't complete - but they were interesting. We had a cup of coffee and left to visit Dunwoodie's Butcher Shop in Ballarat and had a quick look at the Ballarat Art Gallery before I took the train back to Melbourne.

Standing On Foundations

Greg Benford

It is one thing to be an sf fan, another to become a professional, and still more to find oneself walking the hallowed halls of a literary monument, adding a wing to citadels where once you had tread with hushed whispers.

Asimov's Foundation series began in World War II, as America arced toward its zenith as a world power. The series played out over decades as the United States dominated the world's matters in a fashion no other nation ever had. Yet Foundation is about imperium and decline. Did this betray an anxiety, born even in the moment of approaching glory?

I had always wondered if this was so. Part of me itched to explore the issues which lace the series.

The idea of writing further novels in the *Foundation* universe came from Janet Asimov and the Asimov estate's representative, Ralph Vicinanza. Approached by them, I at first declined, being busy with physics and my own novels. But my subconscious, once aroused, refused to let go the notion.

After half a year of struggling with ideas plainly made for the Foundation, persistently demanding expression, I finally called up Ralph Vicinanza and began putting together a plan to construct a fittingly complex curve of action and meaning, to be revealed in several novels. Though we spoke to several authors about this project, the best suited seemed two hard sf writers broadly influenced by Asimov and of unchallenged technical ability: Greg Bear and David Brin.

Bear, Brin and I have kept in close touch while I wrote the first volume, for we intend to create three stand-alone novels which none the less carry forward an overarching mystery to its end. Elements of this make their first appearance here, to amplify further through Greg Bear's Foundation and Chaos, finding completion in Brin's Third Foundation. (These are preliminary titles.) I have planted in the narrative prefiguring details and key elements which shall bear later fruit.

Genres are constrained conversations. Constraint is essential, defining the rules and assumptions open to an author. If hard SF occupies the center of science

fiction, that is probably because hardness gives the firmest boundary. Science itself yields crisp confines.

Genres are also like immense discussions, with ideas developed, traded, mutated, their variations spun down through time. Players ring changes on each other—more like a steppin'-out jazz band than a solo concert in a plush auditorium. Contrast "serious" fiction (more accurately described, in my eyes, as merely self-consciously solemn). It has canonical classics that supposedly stand outside of time, deserving awe, looming great and intact by themselves.

Much of the pleasure of mysteries, of espionage novels or SF, lies in the interaction of writers with each other and, particularly in SF's invention of fandom, with the readers as well. This isn't a defect; it's the essential nature of popular culture, which the United States has dominated in our age, with the invention of jazz, rock, the musical, and written genres such as the western, the hardboiled detective, modern fantasy and other rich areas. Many kinds of SF (hard; utopian; military; satirical) share assumptions, code words, lines of argument, narrative voices. Fond remembrance of golden age Astounding and its letter column, of the New Wave, of Horace Gold's Galaxy— these are echoes of distant conversations earnestly carried out.

Genre pleasures are many, but this quality of shared values within an on-going discussion may be the most powerful, enlisting lifelong devotion in its fans. In contrast to the Grand Canon view of great works standing like monoliths in a deserted landscape, genre reading satisfactions are a striking facet of modern democratic (pop) culture, a shared movement.

There are questions about how writers deal with what some call the "anxiety of influence" but which I'd prefer to term more mildly: the digestion of tradition.

I'm reminded of John Berger's definition of hack work, describing oil painting in *Ways of Seeing*, as "not the result of either clumsiness or provincialism; it is the result of the market making more insistent demands than the art." Fair enough; but this can happen in any context. Working in a known region of concept-space does not necessarily imply that the

territory has been mined out. Nor is fresh ground always fertile.

Surely we should notice that a novel Hemingway thought the best in American literature is a sequel — indeed, following on a boy's book, *Tom Sawyer*? Sharing common ground isn't only a literary tradition. Are we thrown into moral confusion when we hear "Rhapsody on a Theme" by Paganini? Do we indignantly march from the concert hall when assaulted by "Variations on a Theme" by Haydn? Sharecropping by The Greats? Shocking!

Reinspecting the assumptions and methods of classical works can yield new fruit. Fresh narrative can both strike out into new territory while reflecting on the landscape of the past. Recall that "Hamlet" drew from several earlier plays about the same plot.

Isaac himself revisited the Foundation, taking different angles of attack each time. In the beginning, psychohistory equated the movements of people as a whole with the motions of molecules. Second Foundation looked at perturbations to such deterministic laws (the Mule) and implied that only a superhuman elite could manage instabilities. Later, robots emerged as the elite, better than humans at dispassionate government. Beyond robots came Gaia... and so on.

In this three-book series we three "Killer Bs" who stand in the shadow of Asimov and his generation shall reinspect the role of robots, and what psychohistory might look like as a theory. More riffs upon the basic tune.

So I set out to walk the sacrosanct lyceum where once as a boy I had stood in awed wonder. There were oddities and surprises galore.

Laying Fresh Foundations

When I set about writing a new novel set in Asimov's Foundation, titled *Foundation's Fear*, I remembered that I had always wondered about crucial aspects of Asimov's Empire:

Why were there no aliens in the galaxy? What role did computers play?

What did the theory of psychohistory actually look like?

Finally, who was Hari Seldon — as a character, a man?

The new novel attempts some answers. It is my contribution to a discussion about power and determinism which has now spanned over half a century.

Of course, we know some incidental answers. The term "psychohistory" was commonly used in the thirties and appears in the 1934 Webster's dictionary; Isaac greatly extended its meaning, though. He didn't want to deal with John W. Campbell's notorious dislike of aliens who might be as clever as we, so his Foundation had none. But it seemed to me there might be more to the matter.

As well, Asimov's uniting of his robot novels and the Foundation series became intricate and puzzling. The British critic Brian Stableford found this "comforting in its claustrophobic enclosure." There are no robots in the early Foundation novels, but they are behind-the-scenes manipulators in both *Prelude to Foundation* and *Forward the Foundation*.

Some form of advanced computing machines must underlie the Empire, surely. Isaac remarked that "I just put very advanced computers in the new Foundation novel and hoped that nobody would notice the inconsistency. Nobody did." As James Gunn remarked, "More accurately, people noticed but didn't care."

Asimov wrote each novel at the level of the thencurrent scientific understanding. Later works updated the surrounding science. Thus his galaxy is more detailed in later books, including in Foundation's Edge both advanced computers and a black hole at the galactic center. Similarly, here I have depicted our more detailed knowledge of the galactic center. In place of Isaac's "hyperspace" ships I have used wormholes, which have considerably more theoretical justification now than they did when Einstein and Rosen introduced them in the 1930s. Indeed, wormholes are allowed by the general theory of relativity, but must have extreme forms of matter to form and support them. (Matt Visser's Lorentzian Wormholes is the standard work on current thinking. I wrote a paper on wormholes several years ago with Matt, John Cramer, Bob Forward and Geoff Landis, a suitably stfnal subject, published in *Physical Review*.)

Isaac wrote much of his fiction in a style he termed "direct and spare," though in the later works he relaxed this constraint a bit. I did not attempt to write in the Asimov style. (Those who think it is easy to write clearly about complex subjects should try it.) For the Foundation novels he used a particularly bareboards approach, with virtually no background descriptions or novelistic details.

Note his own reaction when he decided to return to the series and revisited the trilogy: "I read it with mounting uneasiness. I kept waiting for something to happen, and nothing ever did. All three volumes, all the nearly quarter of a million words, consisted of thoughts and conversation. No action. No physical suspense."

But it worked, famously so. I could not manage such an approach, so have taken my own way.

I found that the details of Trantor, of psychohistory and the Empire called out to me as I began thinking about this novel — indeed, they led me on my subconscious quest of the underlying story. So the book is not an imitation Asimov novel, but a Benford novel using Asimov's basic ideas and backdrop.

Necessarily my approach has harkened back to the older storytelling styles which prevailed in the SF of Isaac's days. I have never responded favorably to the recent razoring of literature by critics — the tribes of structuralists, post-modernists, deconstructionists. To many SF writers, "post-modern" is simply a signature of exhaustion. Its typical apparatus — self-reference, heavy dollops of obligatory irony, self-conscious use of older genre devices, pastiche and parody — betravs lack of invention, of the crucial coin of SF, imagination. Some deconstructionists have attacked science itself as more rhetoric, not an ordering of nature, seeking to reduce it to the status of the ultimately arbitrary humanities. Most SF types find this attack on empiricism a worn old song with new lyrics, quite quaintly retro.

At the core of SF lies the experience of science. This makes the genre finally hostile to such fashions in criticism, for it values its empirical ground. Deconstructionism's stress on a contradictory or self-contained internal differences in texts, rather than their link to reality, often merely leads to literature seen as empty word games.

SF novels give us worlds which are not to be taken as metaphors, but as real. We are asked to participate in wrenchingly strange events, not merely watch them for clues to what they're really talking about. (Ummm, if this stands for that, then the other stuff must stand for.... Not a way to gather narrative momentum.) The Mars and stars and digital deserts of our best novels are, finally, to be taken as real, as if to say: life isn't like this, it is this. Journeys can go to fresh places, not merely return us to ourselves.

Even so, I indulged myself a bit in the satirical scenes depicting an academia going off the rails, but I feel Isaac would have approved of my targets.

Readers thinking I've gone overboard in depicting the view that science does not deal with objective truths,

but instead is a battleground of power politics where "naive realism" meets relativist worldviews, should look into *The Golem* by Harry Collins and Trevor Pinch. This book attempts to portray scientists as no more the holders of objective knowledge than are lawyers or travel agents.

The recent "re-norming" of the Scholastic Aptitude Tests so that each year the average is forced to the same number, thus masking the decline of ability in students, I satirize in the very last pages of the novel; I hope Isaac would have gotten a chuckle from seeing the issue framed against an entire galaxy.

From Verne and Wells to somewhere near 1970, science fiction was mostly about the wonders of movement, of transportation. Note the innumerable novels with the word star in their titles, evoking far destinations, and stories like Robert Heinlein's "The Roads Must Roll."

But in the past few decades we have focused more on the wonders of information, of transformations at least partly internal, not external. The Internet, virtual reality, computer simulations — all these loom large in our visions of our futures. This novel attempts to combine these two themes, with several conspicuous scenes about travel, and a larger background motif on computers.

As James Gunn noted, the *Foundation* series is a saga. Its method lies in a repeated pattern: Out of the solution of each problem grows the next problem to be solved. This became, of course, a considerable constraint on later novels. Asimov seemed to be saying that life was a series of problems to be solved, but life itself could never be solved. As Gunn remarked, considering that the combined and integrated Foundation and Robot saga now covers sixteen books, perhaps a directory of it all is called for; named, perhaps, Encyclopedia Galactica?

Galactic Empires became a mainstay frame for science fiction. Poul Anderson's Flandry novels and Gordon R. Dickson (in his *Dorsai* series) particularly studied the sociopolitical structure of such vast complexes, for a powerful, autocratic imperial system demands great organizational skill—the primary asset of the Romans themselves.

Isaac was not always consistent in his numbers. How many dwell on Trantor? Usually he says 40 billion, but in *Second Foundation* it is 400 billion (unless that's a typo). Spread 40 billion over an Earth-sized world (with all its seas drained) and that's only about a hundred per square kilometer. Surely housing them would not demand a half-kilometer deep city.

Dates also get difficult to follow, across such immensities of time. Trantor is at least 12,000 years old—and note that we assume that the year is Earth's, though Earth's location has been forgotten. By the Galactic Empire calendar, Pebble in the Sky, which has references to hundreds of thousands of years of expansion into space, occurs about 900 G.E. In Foundation atomic energy is 50,000 years old. The robot Daneel is 20,000 years old in Prelude to Foundation, and in Forward the Foundation. How far away in our future do the Sun and Spaceship emblem rule? Perhaps 40,000 years? No one date reconciles every detail.

Not that it truly matters. I know the dangers of writing a long series over decades. I took twenty-five years to wrestle with the six volumes of my Galactic Center series. Undoubtedly there are contradictions I missed in dating and other details, even though I laid it all out in a timeline, published in the last volume.

The aliens of that series are not those implicated in this novel, but there are clearly conceptual links.

Science fiction speaks of the future, but to the present. The grand issues of social power and the technology that drives it will never fade. Often problems are best seen in the perspectives of implication, before we meet them on the gritty ground of their arrival.

Isaac Asimov was ultimately hopeful about humanity. He saw us again and again coming to a crossroads and prevailing. The Foundation is about that.

What matters in sagas is sweep. This, the Foundation series surely has. I can only hope I have added a bit to that.

2003 Reasons to visit Toronto: #114 The Niagara Escarpment #12 The Bruce Trail #1433 The Royal Ontario Museum

#1090 Toronto Subway System #132 Skydome #1295 Toronto Islands #253 The Beaches

CHICAGO In 2000. presents a Public Service Announcement

We didn't hire a skywriter: but we did want to get the message out to you. The cheapest way to attend the Worldcon if it's in Chicago in 2000 is to vote in the site selection balloting in San Antonio.

Dewey Defeats Trumans: It's the most famous headline in Chicago newspaper history, and it's one that we've taken to heart. Just because we're running unopposed doesn't mean that we shouldn't keep running to the finish line. We want all our supporters to get out and vote, so our membership structure is set up so that you will save money by voting, even if you don't already have a supporting membership in LoneStarCon 2. And if you've collected 20 different Chicago in 2000 trading cards, vote in the site selection balloting, and we win, you'll get a free conversion to an attending membership.

No Pie in the Sky Promises: Instead, we promise you a pie in the face. If you'd like to deliver a pie to the face of a member of the Chicago in 2000 Bid Committee, you can buy our special \$49.95 pre-opposing membership. But if you want to pick the person that you'd like to pie, you'll want our super-special \$99.95 pre-opposing membership. Remember, this offer is only valid if we win, but since we're running unopposed, your chances of delivering a pie are better than ever!

The Ultimate Worldcon – for the Millennium, anyway: We'd be delighted to have the chance to bring you the last – and, we hope the best – Worldcon of the millennium. It's the last big party of the century and the first big party of the Roaring 2000s. You won't want to miss it!

Fandom's Kind of Town: For many fans, Worldcon is their big vacation of the year. When you're not at the con, you'll find there's plenty to do in Chicago. From first-rate theater to big-league baseball, from beaches to blues, from museums to amusement parks, you'll find there's never a dull moment in the great city on the Great Lakes. And as the world's leading airline hub, there's no city in the country that's easier or cheaper to get to!

The City That Works: Chicago's fannish community is large, diverse, and experienced, and so is our committee. We've worked on everything from Worldcons down to our five – all independently run – Chicagoland conventions. And we're looking forward to returning to the Hyatt Regency Chicago, site of Chicon IV and V, where 2000 sleeping rooms and 210,000 square feet of function space and exhibit halls provide one of the finest Worldcon facilities on the planet!

Vote the Winning Ticket: With your votes, the Chicago in 2000 Committee can bring the 58th World Science Fiction Convention to Chicago. (We're not allowed to get out the graveyard vote any more, so your vote is important!) Presupporting memberships are only \$10 and it's never too late to start collecting our SF and fantasy author and artist trading cards. Or, for \$15, you can get our special starter pack with 6 cards included. We'll be giving out cards until the finish – including two in San Antonio – so you'll have the best possible chance to collect 20 cards.

Chicago in 2000 P.O. Box 642057 Chicago, Illinois 60664

Fly away to Philadelphia with Ben Franklin

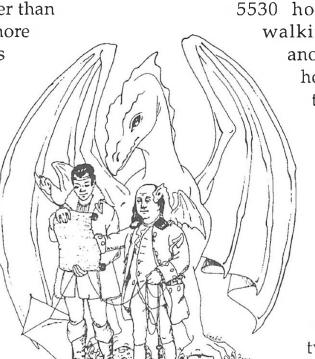

Ben invites you to the worldcon with the best of everything:

• The biggest and newest facilities; 696,000 square feet and 84 meeting rooms. Bigger than the Boston and Baltimore

convention centers

combined.

• The best food; Chinatown (right out the door), Reading Terminal Farmers Market (under the convention center), Philly cheesesteaks, hoagies, soft pretzels and brew pubs!

The best hotel; 1200 rooms connected to the convention center, 5530 hotel rooms within walking distance. Plus

another new 600-room hotel, to open across the street from the convention center, in 1999.

• The easiest transportation; direct rail connection from the airport to the hotel and convention center, bus terminal two blocks away.

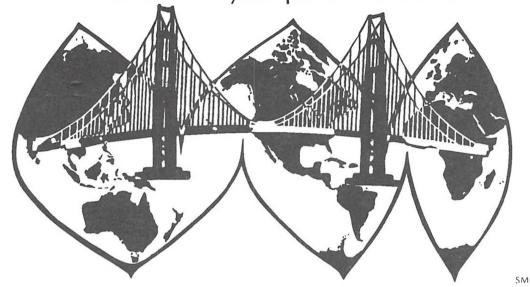

• The most Fan-Friendly committee!

Philadelphia in 2001: The Millennium Philcon^a

You left your ♥ in San Francisco in 1993... Isn't it time you paid it a visit?

San Francisco in 2002

A bid for the 60th World Science Fiction Convention®

Pre-supporting memberships US\$20.02 (A\$25)

Pre-opposing memberships US\$49 • Friends of the Bid US\$100

Pre-supporting, pre-opposing, and Friends of the Bid members receive (while supplies last) a gold-tone cable car pin and a copy of Bridging the Galaxies by Larry Niven and Alicia Austin. Friends of the Bid also receive a custom-imprinted item from the Land's End® collection.

Check out our Web site at http://www.sfsfc.org/sf2002
