ANNIVERSARY

Nº5 FALL

15¢

JAEPHUS - See page 14

PORTLAND SCIENCE-FANTASY SOCIETY

Will you pardon us if we gloat a bit. With this issue, our second year of REGULAR publication starts. In the last year, we've increased the number of pages, gone all lithoed and introduced the new "Pocket Sized" format as well as bringing you an increasing number of the top writers and artists in the field. With your help, we'll go even farther in the future. Keep your own subs up and tell your friends to subscribe.

We'd hoped to bring you more pages this time, but lack of ads made it impossible. However, lack of ads made it possible to get a number of additional items in, which we hope you'll like.

Henry Kuttner has favored us this time with a delightful and unclassifiable item. We don't know whether it is an article or a short-story, but whatever it is, it's wonderful.

It is a pleasure to honor in our first Anniversary Issue, that most beloved of fantasy authors, "Doc" Keller, who graces the AUTHOR, AUTHOR department. The bibliography was compiled by Col. and Mrs. Keller and is a marvel of completeness and also a lot of work. Many thanks to him.

This issue, we have another FANSCIENT discovery, Miles Eaton. Watch that boy; he's going places. We'll let you discover for yourself why we're so excited by reading "The Watcher in the Snow" and another longer piece scheduled in the next issue.

A variety of articles, cartoons and book reviews complete the issue. We need more of these short reviews. If you have any favorite or unusual books, review them briefly and send them in.

Hope you like the issue.

Don Day

P. S.: We need material of all kinds now. It takes time to illustrate stuff well, so send it in as soon as possible.

GEORGE ALLAN ENGLAND

by

THYRIL L. LADD

GEORGE ALLAN ENGLAND was, perhaps more than anything else, a story-teller. True enough, some of his writing was used as a vehicle for propaganda, but, whenever this was so, England was clever enough to see to it that his tale never suffered.

England was an extremely prolific author, and I must confess that I have never seen even an attempt at a complete listing of his work. In this article I shall deal with only five of his fiction titles, and one other. All of these of which I plan to tell appeared in book form, though the greater bulk of England's fiction had only magazine presentation.

I shall attempt no critical analysis of England's style; for me, The Story is the Thing, and when a

Illustration for DARKNESS AND DAWN

story has pleased me and given me entertainment, why should I pick it apart, as to its construction?

England's best known story is, of course, the unusually long tale, "Darkness and Dawn" (1914). This book was originally published as a trilogy of three novels, "Darkness and Dawn", "Beyond the Great Oblivion" and "The Afterglow", and was so reprinted, in later years, in three issues of FAMOUS FANTASTIC MYSTERIES. To me, this story holds a never-failing fascination, nor is my pleasure diminished by re-reading it. It is an account, vividly told, of a young engineer and his stenographer awakening in the top of the Metropolitan Tower, New York City, to find that they have slept a strange sleep for centuries. On awakening, they find New York—America—has crumbled into ruins, man seems to have utterly vanished—the forest has invaded the city—and they seem to be alone in a vacant world. So varied and many are their adventures, so wide the splendid scope of this novel, that space can permit no further revelation of plot. Suffice to say that any fantasy reader who has not read this masterpiece of imagination, certainly should see to it that he does so.

In the next year after "Darkness and Dawn", there was published one of the very unusual books of fantasy. This is "The Air Trust" (1915). Right away, it must be pointed out that England was an avid Socialist, and two, at least, of the novels I discuss herein, were definitely propaganda for Socialism. Indeed "The Air Trust" is dedicated to Eugene V. Debs, perennial Socialist candidate for President. But England's Socialist precepts in this book, positively do not detract from its quality as a fantasy.

drawn by

O. G. ESTES

"The Air Trust" tells of two millionaires who "corner" air, and plan to sell it to Americans, even as gas and electricity are sold today. A young Socialist is their chief adversary in the battle for air, which follows, even to that bitter end when revolution occurs among the people, and they storm the well-guarded factories and vaults of the Air Trust. The love-affair of the daughter of one of the magnates with the young Socialist—her conversion to Socialism—provides the sentimental portion of the book.

Mr. England was still preaching Socialism through his fiction, in his next novel, "The Golden Blight," which appeared the next year, 1916. In this tale, a young scientist, disgusted with the arrogant and unjust supremacy which gold has given to the wealthy, invents a machine—a ray—which causes gold to turn to ashes. Here, indeed, England has created a situation which allows him to paint striking pictures of a world where gold has crumbled to valueless ashes—and he makes the most of it. The reader's enthralled attention is held to the very end of this exciting and unusual conception.

Except for occasional allusions, England now abandons the overall Socialist background for his writing, and we find appearing in 1919 an effective novel of retribution, called "Cursed!" An abused native woman calls down on a ruthless and wicked sea-captain, a terrible curse—one, however, to be delivered on the next generation. The sea-captain, turning to a better life, marries, and has a son. On this son, there falls the dreadful curse of the Maylay witch. Here England tells, and most successfully, the torture of a man's soul, wrung by remorse, and compelled to watch his son follow a course of evil, as foretold to him.

"The Flying Legion" (1920) is

cramped with thrilling and breathless adventure. A giant plane is stolen by a company of men, entirely composed of heroes of the First World War. This group—under rigid discipline, led by one called the Master—have as a final goal no less an enterprise than the stealing away from Holy Mecca certain revered objects of the Mohammedan faith—such as the sacred "golden water-spout," etc. The tale is tense, throughout, and an interesting development is found when one of the supposedly all-male membership of the company is discovered to be a woman. There is plenty of fast action—exciting moments—in this story, which once, by the way, was serialized in the now long-extinct AIR WONDER STORIES.

The book editions of all of these stories were illustrated. "Darkness and Dawn" has a magnificent colored frontispiece, as well as other pictures in black and white. "Cursed" has a striking colored frontispiece as its only illustration, as does "The Flying Legion". Both "The Air Trust" and "The Golden Blight" have a number of black and white illustrations.

England was author, not only of much fiction, but also of a number of travel books. One of these non-fiction titles merits attention in this article; this is "Isles of Romance" (1929), well illustrated with photographs. Interest in this book, to the fantasy addict, lies in the fact that England visited and described—and so well!—some places which have been the locale of weird and fantastic stories by various writers. He visits the Dry Tortugas; old Fort Jefferson, a bastille located 120 miles out at sea in the Gulf of Mexico, and now utterly abandoned by the United States, its owner. Also Anticosti; the Grand Cayman, one-time pirate island and

(Continued on Page 23)

process of extrapolation, I have managed to chart certain probability lines, and the conclusion I've reached seems an inevitable one. Much to my regret, I must point out that after 1958 not a single science-fiction or weird fiction magazine will be published.

The nice thing about extrapolation is that when such factors as semantics, psychology and social dynamics are taken into consideration, you get a pretty vivid picture of what's going to happen. A wiggle on a graph may be significant, but I've been getting my meanings conveyed to me by means of words (and gestures) for some while now, and the impact of the tragedy was brought home more vividly by the nature of the composite picture, which looks less like a graph than a small-sized stage, with people moving around on it, rather nervously. Occasionally there's some blurring, but prognostication is still in its infancy, and my eyes were blurred with tears anyhow.

I don't know exactly what's go-

NO ONE now alive knows the real reason behind the collapse of fantasy's two major magazines. This is not surprising, since the incident is not due to occur until 1958, and, in fact, these particular publications have not yet printed their first issues.

But by a

ing to happen next year, or the year after that, but, generally speaking, a certain trend is going to develop, one that's evident even now. The line of demarcation between fantasy and science-fiction is going to be more sharply drawn. Today some magazines lean toward fantasy, others toward technology, and if they vary too much from their policy, readers often write in complaining letters. As a matter of fact, I've had this happen myself, but I don't pretend to know what kind of stories I write. Maybe it depends on whether I feel fantastic or scientific at the time. It's out of my control, which doesn't seem quite fair. After all, when the readers pay for a magazine, they're entitled to get the sort of stories they want. But this isn't a discussion of my stuff, and, anyway, if anybody wants my opinion, I prefer

Merritt.

However, by 1958 there weren't—won't be—any stories by me in any magazine, and I haven't the least idea what happened. Sometime I must extrapolate again and find out. I did notice a 1958 newstape that mentioned the death of Inri Cutna—that was in the Nu Yok Dali Nus broadcast—but it didn't go into details. This Cutna guy was a professional geek, anyhow, whatever that is. Probably some kind of scientist unknown to our present era.

However, by 1958, I gathered, there was only one publishing firm in the world. All others had been assimilated and the editors were hired too, or, if recalcitrant, shot. The writers were rounded up and confined in a cell-block in the basement of the building, in cells. (The ones who couldn't or wouldn't learn to use wire-tape recorders were also shot. Some of the others demanded pistols, but this request was denied.)

As I mentioned, there were only two magazines left which could be classified as imaginative in type, if you don't count TRUE CONFESSIONS. One was named GEARED TALES, and was edited by a guy named Thirkettle; this was science-fiction. The other was FEARED TALES, edited by a Mr. Pilchard, and this specialized in weird fiction. Both editors were facing a crisis. The Circulation Department had spoken to the Front Office, and the Front Office had sent down a memo, chiseled on a stone tablet.

Thirkettle picked up the May 1958 GEARED TALES and looked at it unhappily.

"Complaints," he said. "No matter what I do, complaints. I've tried to keep GEARED TALES strictly scientific. I've used symbolio covers till I'm black in the face—atoms and graphs and even the multiplication tables. And

still we get kicks. Do you see any element of fantasy in this cover, Pilchard?"

Pilchard looked at it. "No," he said.

"Neither do I. It's a blueprint. Just a plain, simple blueprint. There isn't anything fantastic about it. It's a blueprint of an optical phenomenon on Mars, done in blue, white and black. I even save money by using a two-color process, and what happens? Complaints. Mars is the name of a mythical god, so it's got fantastic connotations. Did I name Mars? And they complain about using blue on the cover. It's got an emotional significance, and emotions are pure fantasy."

"You've got troubles?" Pilchard said. He showed Thirkettle a copy of FEARED TALES. "Look at this cover. A pure abstraction. There isn't a sine curve in it. All the colors we could put in and everything asymmetrical. And I'm flooded with complaints because the cover's too scientific. The frame is rectangular, and that's geometry, a science. How can I put out a magazine shaped like an ink-blot?"

"Science-fiction has to be scientific," Thirkettle said morosely. "No element of fantasy. And vice versa. I've already cut out all the illustrations so I can use logarithmic tables instead. Here's something that slipped by me. A character in a yarn scratched his head, and the author didn't explain the principles of leverage and energy involved."

"You're too easy on your writers," Pilchard said. "You should have had him shot as an example."

"Oh, we put out his eyes, of course, but the harm was done. Floods of letters kicking about the fantasy element. Once let a character scratch his head without determining the causation, and where's science? Newton might

never have lived.

"That reminds me," Pilchard said. I had something similar happen. Your speaking of Newton reminded me of it. One of my authors referred to a newt in a yarn—"

"No!"

"Yes, it seems that the character, experimenting with forbidden arts, had become transformed into an emotional mood in the personality of a certain nameless god, and right in the middle of a good subjective sequence, where the guy felt as though he'd sunk into a morass of miasmic morbidity, he brings in a newt! Of course you know what happened."

"Of course. The frame of reference would have enabled every reader to associate newt with Newton. No wonder you got kicks."

"He won't do it again," Pilchard said, rather gloatingly. "We've got a robot reading back all the

guy's old stories to him."

"But... after all, authors are human. That's going a little far, really. I don't mind a humane discipline like disembowelment, but when it comes to downright—"

"We tried disembowelment," Pilchard said. "The guy just started writing a novel about his guts. No, we've got to be firm, Thirkettle. Once let science-fiction and weird-fiction get together, and you get—" He glanced around and lowered his voice to a whisper. "—science-fantasy."

"S-sh!" Pilchard said hastily. "There are humans present!"

It was, however, too late. Letters of fire appeared on the wall. They read as follows:

"Memo from the front office. We've been withholding the last batch of complaints, hoping the situation would improve, but such subversive talk leaves us no alternatives. You will read the letters from readers, sent herewith, and do what is necessary. Mene mene telak upharain."

A flood of letters cascaded from a chute. Pilchard and Thirkettle, with white faces, glanced at each other and then began to read. The conclusion was inescapable.

All the readers of *GEARED TALES* complained that the magazine was full of letters of the alphabet. Not only were the shapes of the letters asymmetrical and non-geometric (except Q), but the historical connotations traced back to heiroglyphs, based as they were on religious and emotional symbolism. "The alphabet is nothing but fantasy," one reader wrote, or rather charted on a graph. "I shall never read *GEARED TALES* again."

On the other hand, all the readers of *FEARED TALES* complained that the magazine was full of letters of the alphabet. Not only were the shapes of the letters an intellectual synthesis of logical ideation, but the historical con-

notations traced back to heiroglyphs, the result of a rational progression of association and mathematics in which the sum of the parts equalled the whole, which involved an ideation of the colloid mechanism of the brain. (Except Q.) "The alphabet is nothing but science," one reader wrote, or rather finger-painted. "I shall never read *FEARED TALES* again."

Pilchard and Thirkettle lifted their heads. They both spoke at the same time.

"The next issue must be printed on blank paper," they said.

"If you print anything on blank paper, it won't be blank," Pilchard corrected both himself and his co-editor.

"Well, I mean we won't print anything at all on the pages. While we're at it, we might as well leave out the illustrations."

EXTRAPOLATION

And the cover must be blank too, of course."

"It's the only thing to do," Pilchard agreed, reaching for a bottle of white ink. "The next issue of *FEARED TALES* won't have a word in it."

"Or the next issue of *GEARED TALES*. This should boost circulation tremendously. We won't get a single kick."

And this explains why the last issues of *GEARED TALES* and *FEARED TALES*, published in 1958, were absolutely and completely blank. Even the covers were plain, undecorated heavy coated white stock. A completely unexpected result of this slight change of policy, however, was that not a copy of either magazine sold. Not only were the readers quite unable to recognize their favorite publications, but no price was printed on the covers, so that the news-stand dealers were equally baffled and could offer no practical advice. Of course, when the Circulation Department found that all the copies of both *GEARED TALES* and *FEARED TALES* were returned, they spoke to the Front Office, and the Front Office spoke to Thirkettle and Pilchard, who killed themselves. It was decided to discontinue publication of both magazines, under the circumstances. The authors in the basement cell-block were liquidated. (They were made into wood-pulp, in fact.)

Somewhat later, an editor named

Cotswold proposed a fantasy magazine which would combine both science-fiction and weird-fiction, but an army of science-fiction and weird-fiction fans straightway dragged him screaming out of his office and lynched him, after horrible tortures. I believe this is the first and last time the two groups ever united for a single purpose. I have been able to extrapolate as far as 1998, and in that year nothing at all will be published. In fact, the entire world will have been depopulated except for an army of science-fiction readers and one of weird-fiction readers, and they will have exterminated each other completely by, at the latest, 2008.

It all seems rather a pity, but it's out of my hands. I just felt that since my extrapolation has succeeded so well, it would be unfair of me not to share my secret with the world. I have no strong convictions either way, myself, since all I ever read is Dick Tracy. Now there's something that's both scientific and weird. If I extrapolate any more, I'll pass the word along, but it won't be for a while, as the process takes several years, and I'll be tied up next summer, I hope. I'm trying to get a job with some circus. There's more dough in that than in writing. You eat better, too—chicken three times a day.

THE END.

The WATCHER

in the SNOW

by
Miles Eaton.

of rock and I had much ado to veer from the naked trees that rose threateningly before me.

Thus it was that presently I came upon a graybeard, clad in a tattered scrap of skin, who sat with his back leaned against a log. A sword with a spot of red on the point lay bare across his knees and his eyes peered into the snow in the direction in which I traveled. Then I saw on the arms of the trees nearby, huge hunks of new-carved flesh, hanging as if to cure.

The man heeded me not until I laid a hand upon his shoulder, whereupon he started and swung his face upon me. But his eyes sought not mine, but looked thru me into the swirling snow.

"Brother," said I to him, "Do not linger here, for the snow is wet and the wind is keen, and your wrap is thin and worn."

"Go!" said he, and turned once more to look in the direction in which I traveled.

And there was a dim stately city showing faintly through an opening in the snow, no whit closer nor farther than when I had first ob-

And as I walked, it began to snow softly, obscuring the rapids of the Buduwah and swallowing the mists which rose from the boiling spring of Tsoth. So it was that I could no longer discern the Kraangha which kept pace with me a stone's throw to my right hand, and I knew not my direction. And I saw a vision of a stately city looming thru the swirled snow and retreating before me as I advanced, so that it was neither nearer nor farther than when I first observed it.

The snow narrowed my world until it consisted of an arm's length before me and as much behind. I could no longer select the draws between the twisted outcroppings

served it. I nodded at it.

"Come," said I, "Let us journey together toward that city where we might at least find warmth."

"Go!" said he again, and grasped the pommel of his sword in his lean strong hand.

Whereupon I said no more, but scraping together a few twigs, I laid a fire at one end of the log. Striking a pebble against my sword, I soon had a yellow flame which cooped feebly with the falling snow. Then I rested nearby, watching him, for I was determined to find the meaning of his strange behavior.

He paid no heed to the fire, nor did he speak a word to me. I held my tongue and waited, wondering why his eyes never turned from peering into the direction which I traveled. And once the dim city showed again thru the snow and once I heard a low whining as of jackals in the distance, sounding queerly like female voices singing. But the watcher heeded them not, nor addressed me where I rested, so I warned my hands at the fire and waited.

Then from the welter of white that bordered our little world, methought I saw a strange form rising. Born of the snow it was and shining with a cold luminosity of another world. And I counted its legs and viewed its strange bulging shape and the way it flowed like a centipede toward us and I knew that here was no natural thing of evolution, but the product of a madman's dream.

The figure of the watcher stiffened and his hand tightened on the pommel of his sword. Then as the thing took shape before us, he rose, and with a curse leaped upon it, dying the point of his metal with a new scarlet. And I heard the sound of many voices, women's voices, rising in a wild paean of triumph, and looking, I saw the stately city, nearby now, advanc-

ing on us as a beast advances. And the pulsating of its golden walls was the breathing of the breath of life and the chorus of sweet female voices was the sound of its great heart beating.

But the cries of the watcher called me to his side. He screamed with rage and fear as he pursued his mad attack on the creature of the snow. And now as I watched, the contours of the beast changed subtly and shrank into a form strangely human and feminine. And from its monstrous throat went up a female cry of anguish, echoed by the chorus of voices from the city. Strong in my ears beat the lewd pulsation and of a sudden, I knew a great fear.

For the beast was a woman born, with dark lashes and a smile for those who long for women. And as I looked, the watcher's arm grew lax with awe and wonder and the woman leaped upon him, once more a noisome beast that never knew a mother.

I heard him scream once, short and quick. I plucked my blade from my side and leaped to help him. From the midst of the thing, his metal yet licked at vital spots of life in the thing that had no life.

And Lo! together we addressed it and made our business with it, while in our ears rang the dirge of the chorus of females of the noble city. Together he and I, we swung till our arms grew faint and our heads swam and we dispatched it together, and with the last gasp from its throat, which was no breath of earth, the chorus died and the snow obscured the nightmare of our battle.

And we divided it, he and I, into three parts, one of which we flung into the swirling rapids of the Buduwah, another into the boiling spring of Tsoth and the third, we hung, as game is hung, from the

(Continued on Page 23)

JAEPHUS

by Donald B. Day

So many misconceptions are abroad concerning my association with Jaephus, that I feel that the true facts should be put on record. To begin with, it is not even certain that he is a lobby. True, he considered himself one and would retaliate in the particularly messy way at which he was so adept, when anyone referred to him as an "invisible dog."

It was about 1938 when our paths first crossed. This morning, the magazine crew I was working with then was assembling, ready to leave the office. Bill Oliver climbed into the back seat and closed the door. Suddenly there was a wild thrashing of arms as, beside me, Bill beat the air in front of us. It ended as quickly, as Bill made a quick grab and held triumphantly at arm's length, something I could not see.

"I told you to stay home, Jaephus. What's the idea of sneaking along?" Bill sternly addressed his

apparently empty hand. The hand shook in token of an invisible struggle, then was still. Bill ripped out a string of curses as he surveyed a spreading wet spot on his trouser leg directly under his outstretched hand.

Such was my introduction to Jaephus. Bill had just moved to a new hotel and reported finding him sharing the new quarters. Since Jaephus went out with the crew often, I soon became well acquainted with him. If not crossed, he would leave you alone, generally. But woe to him who aroused the ire of Jaephus. His temper was formidable and retribution was quick.

Despite his small size, nature had equipped him well for survival. He could grasp with both his tentacles and his forearms while the hooves on his hind legs bruised and the talons on his middle pair of legs scratched unmercifully.

Jaephus was also difficult to catch, due largely to the eyes situated in his buttocks, enabling him to see in all directions at once. It was, however, in his typical gesture of defiance that these eyes came most into play. With their aid, he was able to direct the by-products of his peculiar metabolism to the precise spot that would most disconcert his antagonist.

All this time, I've been talking about Jaephus, the lobby. As was

stated above, it is still not certain that he was a lobby. At the time Jaephus first appeared, Nelson Bond's series of radio programs, "Mr. Mergenthwinker's Lobbies" was on the air. Bill, hearing one of the programs, and shortly encountering an invisible creature of unknown classification, tentatively identified him as a lobby.

The name, "Jaephus", was Bill's memory of the name of one of them. Jaephus offered no objection to the name, tho there is no evidence that it was his true name.

In contrast to his indifference to the name, was his unmistakable insistence that he was a lobby. At the time, we took this to be proof that our identification had been correct. Our assurance was rudely blasted a bit later, tho, on reading for the first time, Mr. Bond's excellent description of the life and habits of lobbies. You see, Mr. Mergenthwinker's lobbies told him things. And Jaephus never uttered a word.

Bill and I took Jaephus to task about this one day in a booth at The Nugget. We waxed ironic. We insinuated that perhaps he was not a lobby at all. Or if a lobby, then a moronic one.

That we touched some sore point, was attested by the fact that he didn't retaliate in his customary way for such insults. He simply sat there and radiated superior contempt. To one not acquainted with Jaephus, it is difficult to explain. Radiating contempt without spoken words or visible expression or gestures is admittedly difficult. Perhaps he did it thru some form of sub-sonics. It may be that, knowing him and his supreme contempt for mere humans, we simply recognized his attitude in his silence.

At that time, we made only one further attempt to identify his species. With the lie that there he would find ample quantities of

free beer, we lured him to the office of a biology professor at Reed College. Out of deference to a once fine mind, I shall omit the man's name. Unfortunately he was unable to tell us anything further about Jaephus. In fact, the last I heard, he still hadn't said anything. He simply sits rigidly, staring straight ahead and has to be fed through a tube. At the last count, he had worn out 53 tubes.

It was shortly after this tragedy that I left the magazine crew. Except for the occasions that I drank beer with Bill and some of the other boys, Jaephus largely passed out of my life.

In due course, the war came and with it my greetings. The eve of VE-Day found me an army medic on a Hospital train, shuttling all over Europe. We lived, four men to a regular French sleeping compartment, right on the train. We were stationed wherever the train stopped, tho until shortly before the end of hostilities, it seldom stopped long.

During one of our layovers in Paris, I was standing at the bar in the Cafe Biard at Place Clichy. Beside me on the bar was a shot of cognac and "un demi" of the watery French beer.

I was deep in conversation with Marcel, the bartender. At the time, my French was practically non-existent and since Marcel knew no English, getting the simplest ideas across required considerable concentration. Having put some point across by sheer force, I turned to my drinks for restoration. To my surprise, the cognac glass was now empty. I glanced down the bar. No one was near me. Over at a table, a "Fille de Joie" named Louise was playing some GI sucker along. She was a notorious moocher and drunk-roller, but a moment's reflection convinced me that stealing someone's drink was

(Continued on Page 29)

David H. Keller M. D.

AUTHOR, AUTHOR

DAVID H. KELLER, M. D.

It would be difficult to evaluate in full, the contribution that David H. Keller, M. D. has made to the field of science-fiction and fantasy literature. It is not enough to say that his stories are to be found among the best in every type in the field: science-fiction, weird, horror and pure fantasy. To speak of his mastery in the telling of tales, his deceptively simple economy of phrase, the terrific impact he can convey with a few quiet words, is to tell only half the story.

Back in 1928, with a few notable exceptions, "stories" stood and fell on the scientific idea. Practically everything was new then, plots were sketchy, and characterization was practically non-existent.

It was on this scene, then, that "Revolt of the Pedestrians" appeared in the February 1928 issue of AMAZING STORIES. It was a new type of science-fiction story that was to exert a profound influence

on the entire field. The scientific idea was there, but that was not all. The story was primarily concerned with people; with their actions and reactions under the impact of a new idea.

Today, when the accepted form of story, aside from the "action" pieces, is the psychological tale, it is difficult to realize the extent to which Dr. Keller's stories differed from what had gone before. Suffice it to say that this first and the stories that followed, quickly brought him to a position of leadership in the field.

In spite of holding a full-time job, he remained among the most prolific authors over a period of years. Classic after classic rolled from his typewriter, to cease only when pressure of his army duties forced him to curtail his writing during the war.

It is with pleasure that we now hear from "Doc" Keller, one of the most beloved of fantasy authors.

On the 23rd of December, 1880, my parents had a birthday party at which I was the guest speaker. At that time a blizzard was raging in

Philadelphia, which limited the attendance at the reunion.

My ancestors left France and Germany between 1740-50 for a new

home in Pennsylvania. Here they founded the town of Kellersville in what is now Monroe County. A complete history of these families is contained in my KELLERS OF HAMILTON TOWNSHIP and the GEORGE-WHITSKILL FAMILIES.

Members of these families have served in every war from the French and Indian; but, while excellent soldiers, remarkable progenitors and clever politicians, none have shown any inclination to write except myself.

After receiving a preliminary education in the Boy's Central High School of Philadelphia, I entered the Medical Department of the U. of P., graduating at the age of 22 1/2 years. Thus there was no opportunity for a cultural education. In later years this was much regretted and has caused my rather celebrated statement, "I never had an education."

Three years of practice increased the desire to live in the country. The next nine years were spent as a Horse and Buggy Doctor in Russell, Pa. It was a hard life. In 1914 I worked in Pleasantville, N. J. in an effort to regain my health. Then I became a physician in the Anna State Hospital for Abnormals in Illinois. While there, I was given a commission as 1st Lieutenant in the Medical Reserves, and was called to active duty at the onset of World War I.

From that time until June, 1945, I served either as an officer in all of World Wars I and II, or as Assistant Superintendent of State Hospitals for the Abnormals in Louisiana, Tennessee or Pennsylvania.

In June, 1945, I was placed on inactive duty as a Lieut. Colonel and retired for physical disability. Being subject to call, I expect to see active duty in World War III in which war there will be need for all the experienced phys-

icians available for service to the abnormals. While I am waiting for the bugle call, I am resting in Underwood, my home in Stroudsburg, Pa. There my wife, Celia, and my dog, Yum Yum, keep me company. Sometimes the three of us take long automobile tours. At home, we write and play cards, and work in our garden and write. In our spare time, we WRITE.

This Folly of Writing started early in life when I put myself to sleep telling stories. Later when I learned to read, I became familiar with Henty, Haggard, Kipling, Dickens, Barrie and Ian MacLaren. Writing permitted me to become acquainted with David H. Keller.

An old latin motto states, "We learn to do by doing." At the age of fifteen, I had my first story published in a newspaper. After that, more stories and poems in High School, College and religious papers. In college I became an Associate Editor of an amateur magazine, THE WHITE OWL. Six of my stories were printed in it.

After that I simply wrote for pleasure and made no effort to sell or print. Over five thousand pages of typewriting were produced of novels, stories and poems.

In the fall of 1927, I bought a copy of AMAZING STORIES, read it and in longhand wrote a science-fiction story, THE REVOLT OF THE PEDESTRIANS. Hugo Gernsback bought this and then printed it in AMAZING STORIES, Volume II, No 2, February 1928.

From that time on I wrote in all spare moments. Science-fiction, weird, off-trail. All simply flowed in an apparently unending stream from the Old Corona, as a study of my bibliography will show. But that makes no mention of several medical books and over seven hundred and fifty medical articles. During one period of forty-seven consecutive days I was able to write a 300,000 word medio-

al book during my hours off duty. While in active service in war times, I wrote very little. Now, in ripe maturity, I find there is not enough time for all the literary work which seems so important. One book is born, two are in the process of birth and four are gestating. My friends urge me to re-write four of my earlier novels and I have a new novel and fourteen new stories to write.

"This is not as deep as a well nor as wide as a church door", but it should suffice. The fact is that it does not. Many fanzine editors write asking for contributions. Someday I will complete an additional bibliography giving only fanzine stories, articles and poems. That will be interesting.

Rejections? Many. Reasons? Varied. My collection of reject letters would not fill a pillow or paper a room but some day will furnish material for a fanzine article. Many were rejected because they were too beautiful. I

have called this "The Kiss of Death". One was rejected as being "too horrible to print" but this story, now printed twice, is being praised by the reviewers.

All in all the first sixty-eight years of life have been happy. In the words of the immortal G. I. Joe, "It's a great life if you don't weaken."

---David H. Keller, M. D.

A Bibliography of the Science-Fiction, Weird and Off-Trail writings of Dr. Keller follows. It is of interest to note that one story has been reprinted six times; three stories, four times; two stories, three times; eighteen stories, two times.

This bibliography was compiled by Dr. Keller and the classification is his.

Noteworthy is the fact that the 128 stories listed here appeared in 58 different magazines and books.

GEORGE ALLAN ENGLAND (Continued)

THE WATCHER IN THE SNOW (Cont.)

the island that was the scene of Robert Louis Stevenson's immortal "Treasure Island". Then Sable Island; and fantastic indeed, the out-of-the-way Island of the Swallows, on the coast of Yucatan. His account of Grand Cayman does not fail to discuss the belief of its inhabitants in Voo-Doo.

Here, then, are listed and somewhat described, five novels and a travel book which make up most of the author's book-form contribution to fantasy. I make no attempt to enshrine these books on any pedestal of greatness, nor will I essay to compare England's fiction with that of an others who may have executed fiction of a more or less like character. I do not care to discuss any defects which may exist in his style. He has brought to me unusual and fantastic reading, and he has never failed to entertain me in his stories. An author who has pleased and entertained his reader has been, I think, a success.

To me, the fantasies of George Allan England are treasured reading.

THE END.

naked arm of a tree.

Then the watcher sat once more with his back leaned against a log, peering into the snow in the direction which I traveled.

As for me, I was taken ill at once, with a great and awful horror of what lay between us and the stately city. Turning, I fled in the direction from whence I had come, past the rapids of the Buduwah, past the boiling springs of Tsoth, back to where the Kraangha kept pace with me a stone's throw to my right hand.

And once I looked back to see dimly, the watcher still sitting with the pommel of his sword in his strong, lean fist, and beyond him, a vision of a stately city, neither closer nor farther than when I had first observed it.

THE END.

Synthetic NOSTALGIA

by NORM STORER

Have you ever felt the wish to be in the locale of some of the stories you read? I mean, did you ever wish that you, like the hero, could sit in a night-club on Luna or picnic on Mars or live in the utterly alien crystal cities of Rigel IV? I have had that feeling before, and am always in search of a new story that will give me the same feeling. I call that desire, that dream, Synthetic Nostalgia.

It came over me more frequently when I was new to science-fiction, and was more easily impressed, but it still does at rarer intervals. Stories like "Forgotten World", "Requiem" and "Million Year Picnic" were the ones I thrilled over then and still do when I read them again.

Maybe I'm alone in this particular mood, but sometimes I just bemoan, terribly, the fates that put me here before the day of interstellar flight. Sometimes it's a whole story and sometimes it's just a particular passage that affects me so. But whatever it is, it makes me wish with all my soul that I could be there or had been

there. It's one of the big thrills that I get out of reading fantasy, and should be one of yours.

I don't mean the hum-drum epics of the Space-Lieutenants or the super-science stories of weird gadgets, but just the simple, appealing descriptions that make a place live. Oh, there have been tear-jerkers that I have read that could fairly make me burst out crying—like "With Folded Hands..."

—and tales of the way men have treated aliens that have just plain made me mad—"The Last Monster"; for instance, but the simple stories of real people are the ones I speak of. The plain but glorious markers set up on the moon to the first pioneers—the way they are described, "in their flimsy little space-cans", just do things to me. I'll be old when these things happen, I'm afraid, but I'm sure there will be such things. Don't you feel a bit sad to think that the first men in the Moon are only nine and ten now?

I've called this feeling synthetic nostalgia, for that is the best way I can describe it. It is a longing for places yet unheard of, and a nostalgia that is not quite, but so near real that you feel it needs just a little dash of reality to make it true, accurate. That's the nostalgia of it. The synthetic is because it has been created out of whole cloth by men like ourselves who live today, and yesterday.

Really, then, to get this poignant yearning for a fictional location is a compliment to the author that cannot be expressed in so many words.

That feeling that I've called synthetic nostalgia is one of the most precious and memorable things I've gained from reading science-fiction. I only hope that feeling has come to the rest of you, too, so you'll know what I'm talking about.

THE END.

ROBERT E.

HOWARD

by Carl Dumbleton.

ROBERT E. HOWARD (1906-1936) was born in Texas, the son of a pioneer physician. He started writing at the age of 15. Three years later he sold his first story to WEIRD TALES. In a very short time his work became popular.

He was versatile and prolific and was one of the few pulp magazine authors who made a living (and a very good one) from his writing alone. He wrote weird, western, sport and adventure fiction as well as poetry, very little of which has been published.

In his writings, he created many memorable characters. Among the most popular of these were: King Kull of Valusia (a kingdom of long ago Atlantis), Conan the Cimmerian (an ancient barbarian adventurer) and Solomon Kane (a dour English Puritan righter of wrongs).

Of these, Conan had the greatest popularity, and Howard wrote many short stories as well as three novels with him as the central character.

To give more reality to his stories of Conan, Howard created a history of his age; of the peoples and kingdoms of that time, a period pre-dating the present about 15,000 years. This history is as fascinating as any of Howard's stories, and very creditable, showing the author had spent much time and research into ancient history and mythology.

This history is called "The Hyborian Age". It had its beginning with the waning of the pre-cataclysmic civilization, dominated

by the Kingdoms of Kamdia, Valusia, Verulia, Grondar, Thule and Commoria. The barbarians of that time were the Picts, Atlanteans and the Lemurians. After the cataclysm, Atlantis and Lemuria sank.

The barbarians fared a little better than the civilized nations during this world upheaval. One band of savages fled to the north to escape destruction. In time, their numbers increased and they became known as the Hyborians. As they increased, they spread southward in an epoch of wandering and conquest.

In time they dominate the western world. The Picts and Atlanteans still remain savages, tho the Atlanteans, now known as Cimmerians, show an increase in civilization from their close contact with the Hyborian Kingdom, by this time highly civilized.

The principal races of this era were: the Vanir and Aesir of Nordheim, blue-eyed and blond or red-haired savages from the north; the Hyborians, by this time a mixture of many races, their characteristics depending upon which part of their large kingdom they inhabit; the Cimmerians, tall and powerful, with dark hair and blue or grey eyes; the Picts, short, very dark, with black eyes and hair; the Hykanians, dark and generally tall and slender; the Shemites, of medium height, broadly and strongly built, with hook noses, dark eyes and black hair; and finally, the Stygians, tall, well built, dusky, straight featured.

The lower classes are a down-trodden, mongrel horde; a mixture of negroid, Stygian, Shemitish and even Hyborian bloods.

Eventually the Hyborian civilization is swept away by the power of the barbarian nations. This is brought about by a Nemedian priest who goes into the western wilderness to teach the barbarians modern

ern ways.

He instituted many reforms, but, most important, showed the Picts how to mine, smelt and work iron. Also, he brought parties of Picts out into the civilized countries. This made them covetous of what they saw.

Their warriors took service in the mercenarries of these countries thus gaining knowledge of modern warfare. Finally they swept the borders of Hyboria with fire and sword.

Other nations, scenting the kill, joined in and completed the ruin of the kingdom up to the borders of Hyrkania. There the invasion was stopped, leaving a vast Pictish empire, rude and barbaric, opposed by the Hyrkanians.

Picts and Hyrkanians fought border skirmishes for a short while, then came the glacier ages and the great Nordic drift. The Aesir, moving southward, blotted out the ancient Kingdom of Hyboria. The Cimmericians moved to the east, pushing everything before them. They were followed by the Aesir and Vanir and the Pictish empire reeled before them. The Cimmericians destroyed the Hyrkanian Kingdom of Turan and settled on the southwestern shore of an inland sea. The peoples thrown out of this country rode back from the east in a wave of conquest thousands of years later, but now known by new names, such as Hun, Mongol, Tartar and Turk.

The Vanir built a vast southern empire which they called Egypt. The western world was dominated by the Nordic barbarians. The blond Achaiaans, Gauls and Britons were descendants of the Aesir. The Danes were descendants of the Vanir. The Goths were descendants of mixed races—Vanir, Aesir and Cimmerician. The Celts came from the Cimmericians, while the Etruscans, base of the Roman race, were from mixed Stygian, Hyrkanian and Pictish strains.

But to get back to Conan, Howard took him thru such different stages of development as a thief, an outlaw chieftain, a pirate, a mercenary soldier, a captain of the guards, a commander of armies and finally, ruler of a kingdom.

Conan, in spite of his climb up the ladder of fortune, never becomes quite civilized; he remains a barbarian to the end. He enjoyed a good fight, and indeed, if all the blood he let from his enemies was put in one place, it would make quite a lake. Women were secondary to a good fight with him; he could love them or leave them alone; however, most of his adventures were brought about thru them.

Other writers have been able to create ancient kingdoms, but none has been able to instill life and action into them as Howard has done. It was a sad day for many

(Continued on Page 28)

MORGAN ROCKEFELLER'S WILL by Francis H. Clarke. Clarke-Cree Publishing Co. 1909.

This interesting, if disappointing future novel is a rarity indeed. Its scariness is attested by the fact that the title is not only missing from the CHECKLIST, but also from the Library of Congress Catalogue of Printed Cards.

Published here in Portland, the story opens in 1990 when Morgan Rockefeller, the great-great-grandson of the late John D. Rockefeller, is ruler over the United States in all but name. An organization known as the "Reapers" is trying to bring about his downfall. However, Morgan, a benevolent despot, dies from a broken heart. Consternation reigns when the will is read. Rockefeller leaves all his property to the United States Government; a most unusual thing to do in that future day. The complications are heightened by the discovery that the only living descendant of Morgan is the beautiful Helen Channing, head of the "Reaper" organization. Nobody wants Morgan Rockefeller's property and all is confusion. The conclusion is worked out to the author's satisfaction and the reader's boredom.

Studying Mr. Clarke's political and sociological philosophy, one becomes puzzled. The Author's idea of Utopia seems to be a potpourri of Socialism, Communism, business paternalism, religion and a generous dash of fraternalism. In this reviewer's opinion, the result is hash.

Leaving Mr. Clarke's philosophy bloodied in the dust, we turn to more interesting sidelights. Chief among these is the invention of the "Mirage Reflector" which bears a close resemblance to television, although the basic principles of each differ quite a bit. Ship de-

sign has been altered to a type of winged craft that glides along the surface of the ocean. No mention whatever is made of aircraft. An intriguing and uncomfortable scheme is the planting of bombs beneath each large city of the United States. These bombs are to be detonated from one central chamber should the "Bourgeoisie" rise in revolt. In this future world, the United States capital has been moved to St. Louis. Outside of these few concepts, Clarke's 1990 is an extension of the life of 1909.

A noteworthy paradox is the fact that while the story is sub-titled "A Romance of 1991-2", ninety-eight percent of the action occurs in 1990. This 1990 will be remembered by readers of this story, as the longest year in history. The novel begins in 1990 and approximately eighteen months later, it is still 1990!

In regretful conclusion, the book retains its dignity only as a curio. Adding up Mr. Clarke's passe style, Victorian characterization and contraband philosophy, the sum is "0". —Eric Atlas

HIS PSEUDOIC MAJESTY (Knights of the Fleece) by William A. Smith. Liberty Publishing Co. 1903.

This curious and rare (it is not to be found in THE CHECKLIST OF FANTASTIC LITERATURE) tome is a lackadaisical blend of fantasy, allegory, Americanism and foolishness.

The plot revolves about Columbiason; a plain, ordinary American, until he is told by an imaginary knight to trace back his ancestry. Doing so, he discovers himself a descendant of nobility. This gives him many grandiose ideas. During the course of events, he goes to England, digs up and revivifies an ancient ancestor and returns home to America, only to be disappoint-

ed by the English King's refusal to give him a title. Columbia-son's notions about the duties of a Knight of the Garter, the Master of the rolls, and sundry other officers result in some heavy-handed humor.

The latter portion of the book deals with Columbia-son's visit to Pseudoland and his discovery that plain, old Americanism is the best way of life. While fantasy is not accented, the book is sprinkled liberally with outre occurrences. Among these are the descent of a foster-child from the sky; the appearance of the head of Columbia-son's mother in a ball of fire; the visit to Pseudoland where strange inventions are explained and magical happenings take place. An airship flies from country to country (remember this was written 1903).

There are several illustrations which are rather crude, yet striking. The author also provides many bits of doggerel under the delusion that they are poetry. They will not increase the reader's enjoyment.

In conclusion, if the reader is willing to wade thru quite a bit of inanity, he may find pleasure in the perusal of this fantasia.

—Eric Atlas

ROBERT E. HOWARD (Continued)

of his readers when he died at the early age of 30, just when he was on the threshold of who knows how great a success as a writer.

A collection of his stories has been published by Arkham House, under the title of "Skull-Face and Others". These stories have, for the most part, been taken from WEIRD TALKS magazine, and while it is an excellent compilation, I think it would have been better for a full-length Conan novel. But then, I won't be satisfied until all of Howard's works have been put into book form. THE END.

"Yours?"

JAEPHUS (Continued)

n't her racket. Around the corner of the bar was one of the few French bar-flies I ever saw. However, the intervening space was covered by the steely eye of Madame la caissierre, and it was clear that she would stand for no foolishness.

I shrugged. Undoubtedly I had drunk it in the heat of our discussion. I ordered another. Marcel set it up; I downed it and reached for the beer. The glass was empty.

Furtively I surveyed my surroundings again. Could it be that I had drunk that many? Nothing daunted, I ordered another cognac and another beer. This time I kept each glass firmly clenched in a sweaty hand. I spoke to Marcel and glancing down, saw the level slowly slipping down in the cognac glass. This looked familiar. Slowly relinquishing my grip on the beer glass, I made a quick grab.

There was a brief flurry as I felt a pair of familiar leathery wings struggling in my grasp, then strangely, a small smooth cheek nuzzled against the back of my hand. Thin tentacles stroked my wrist carressingly and there was a quick shudder of ecstasy. It was the first of the only two times I ever knew Jaephus to unbend. In spite of his colossal self-sufficiency, I imagine the poor little fellow had been lonesome. Certain it was that he was glad to see me, tho he immediately resumed his aloof pose. During the next several months, Jaephus was seldom far from my side.

No sooner had I brought Jaephus back to the train than his actions brought him to the attention of the whole outfit. It was in connection with inspections, which he detested, that he made himself

most felt. The wrinkles in the bunks where he rested briefly after they had been carefully smoothed—the "mice"—lint balls—he dragged out from some obscure corner, to repose in full view of the inspecting officers.

It also became inadvisable to leave saleable articles such as soap lying around—Jaephus would promptly take them out and peddle them on the black-market.

All this led to the need for many explanations. To simplify these, I drew a portrait of Jaephus. To describe his excitement while the work was in progress would be difficult. Time after time, I had recourse to the eraser as Jaephus, in his excited flutterings, joggled my arm. Others put the difficulty down to my own artistic ineptitude or the jolting of the train. In any case, eventually it was done and we cast about for a suitable place to display it.

Opening onto the corridor from our compartments were windows and a sliding door, also containing an expanse of glass. We finally attached the picture to the inside of the glass on the door. With the door open and the side shade pulled down, it was covered, to be revealed only when the door shut.

Jaephus' excitement over his portrait lasted for some time, but it was when he had an admiring audience, that his enthusiasm got completely out of hand. So it was, the next morning when I took one of our nurses, Lt. Leonna Hartwig, into our compartment to show her Jaephus' portrait. Jaephus hovered in joyous anticipation as I ushered her in. As I closed the door, revealing the portrait, Jaephus flew into a frenzy of excitement. He darted hither and yon. He danced with joy. Unfortunately, in his wild careering, he side-slipped into a dive, ending, horns prodding and tentacles flailing,

against a particularly sensitive part of Lt. Hartwig's anatomy. Striking low, he found himself pocketed in a part of her clothing where the fabric was unsupported by the form beneath. Struggling to catch himself and following the lines of least resistance, he moved upward.

Jaephus being invisible, and I standing behind her, Lt. Hartwig unfortunately put the wrong interpretation on the incident. She screamed!

"No, Don't Don't!" Lt. Hartwig was a healthy girl and had a strong voice. It carried. It carried so well that when, shortly, we left the compartment, it was to be met with heads sticking out of every door along the corridor.

That was only the beginning of the accusations that were to be heaped upon my innocent head because of Jaephus. To catalogue the charges of drink-stealing, of "frottage", that I endured in the next few months, would be impossible.

Jaephus rode me like some insatiable "Man of the Mountains". It was at this time that I took to ordering my cognacs in pairs. It sometimes caused a little comment, but it stopped Jaephus from stealing the other patron's drinks, thereby inviting suspicion on me. This last gave me an undeserved reputation as a tankerman that was to evoke comments, ranging in expression, from awe to disgust. If the truth be known, I'm afraid my own consumption did increase during that time, due to Jaephus' bad example.

In all this time, Jaephus still had not uttered a word.

About this time we noted a tendency on Jaephus' part to go native. He paid no attention when addressed in English, responding only when the language used was French. He turned more and more to the company of such French peo-

ple as would tolerate him. Most of them tended to ignore him, but he found acceptance among the cafe waiters and prostitutes. Especially since the Americans came, nothing surprised a French prostitute. They considered him merely another American, no stranger than most others.

It was on a night late in September, that I last saw Jaephus. We had come again to Paris. It was just after eleven and the Cafe Biard had closed. We were taking a shortcut back to the train. Jaephus was perched on my shoulder as we threaded our way thru the dusk of a back street near Place Blanche.

Absently I noted the flutter of tiny wings. So Jaephus had flown off to investigate something on our route. But no, Jaephus' weight still rested on my shoulder, but I felt him stiffen. Abruptly the burden was gone from my shoulder.

I heard voices, but to my straining eyes, the street was empty.

"Ou allez vous, Mademoiselle?" An undistinguishable murmur, a feminine giggle and more murmuring of which I could distinguish only the same girlish voice saying, "Oo-la-la," and the mock command, "Doucement, Monsieur."

Then as my eyes and ears strained into the darkness, a familiar flutter of wings approached.

"Adieu, mon Ami," said Jaephus. How ironic that his first words to me should be a farewell.

So great was the shock of hearing him speak after all these years that I could only murmur, "Au revoir."

"Pas au revoir," he replied gently, "Adieu. Je me trouve chez moi."

And as I stood there bemused, listening to the beat of two pairs of tiny wings fluttering off into the Paris night, I wondered.

Could it be that Jaephus was a true lobby? A French lobby?
